Nonlinear Waves In Bounded Media: The Mathematics Of Resonance Brian R Seymour, Michael P Mortell, 2017-01-18 This unique book aims to treat a class of nonlinear waves that are reflected from the boundaries of media of finite extent. It involves both standing unforced waves and resonant oscillations due to external periodic forcing. The waves are both hyperbolic and dispersive. To achieve this aim, the book develops the necessary understanding of linear waves and the mathematical techniques of nonlinear waves before dealing with nonlinear waves in bounded media. The examples used come mainly from gas dynamics, water waves, and viscoelastic waves.

A Primer in Fluid Mechanics Dynamics of Flows in One Space Dimension Jr. Brower, 2024-11-01 This distinctive text presents the basic principles of fluid mechanics by means of one-dimensional flow examples differing significantly in style and content from other books. A Primer in Fluid Mechanics contains an overview of fluid properties and the kinetic theory of gases, information on the fundamental equations of fluid mechanics including historical references and background information, introductory discussions on fluid properties and fluid statics, a comprehensive chapter on compressible flow, a variety of applications on non-steady flow including non-steady gas dynamics, a brief introduction to acoustics. Novel provisos in the text include an analysis of the static stability of a floating two-dimensional parabolic section, viscous flow through an elastic duct, several geometries in non-steady tank draining including a singular perturbation problem. Chapters also discuss physical properties, atmospheric stability, thermodynamics, energy, and momentum equations, dimensional analysis, and historical perspectives of flows in pipes and conduits. A Primer in Fluid Mechanics offers a rigorous text for the curious student and for the research engineer seeking a readily available guide to the more refined treatments in the literature, supporting classical and current discussions as well as theoretical and practical concepts.

Next Generation Energetics Jacqueline Akhavan, 2025-07-18 Held for the second time in the UK, the international conference in explosives and other energetics took place in June 2024. These conferences host international academics and practitioners who share and showcase research undertaken in this area. Particularly important is the part the UK plays as one of the world leaders in this area with the opportunity to provide unclassified and novel research. This book contains the proceedings of this meeting and comprises unique, peer-reviewed papers which are highly desirable for researchers in this field. Divided into two sections on synthesis, characterisation, and diagnostics, and artificial intelligence simulation and modelling, the book captures the fundamental science of explosives and energetic materials that underpins deeper understanding of explosives, propellants, pyrotechnics, and gas generators. All professionals from early careers through to subject matter experts will find topics of interest in this snapshot of research.
