

Chapter 6 – Process Control

1. Process Workflow

Based on analysis in defining the concept of Process Control.

The process managed by the FETM system can be divided in the following flows:

- Data Loading;
- Processing of the data through the search of calculations;
- Adjustment;
- Calculation and Data Consolidation;
- Approval of Data;
- Lock of the Data.

Based on Process Control the user can search calculations and check the approval status of the Entity (Company and EXOS) under his competence.

Automated Continuous Process Control Carlos A. Smith, 2002-03-05 Automated Continuous Process Control pulls together in one compact and practical volume the essentials for understanding designing and operating process control systems This comprehensive guide covers the major elements of process control in a well defined and ordered framework Concepts are clearly presented with minimal reliance on mathematical equations and strong emphasis on practical real life examples Beginning with the very basics of process control Automated Continuous Process Control builds upon each chapter to help the reader understand and efficiently practice industrial process control This complete presentation includes A discussion of processes from a physical point of view

Feedback controllers and the workhorse in the industry the PID controller The concept and implementation of cascade control Ratio override or constraint and selective control Block diagrams and stability Feedforward control Techniques to control processes with long dead times Multivariable process control Applicable for electrical industrial chemical or mechanical engineers Automated Continuous Process Control offers proven process control guidance that can actually be used in day to day operations The reader will also benefit from the companion CD ROM which contains processes that have been successfully used for many years to practice tuning feedback and cascade controllers as well as designing feedforward controllers *Fundamentals of Process Control*, 1966 **Process Control** Pao C. Chau, 2002-08-26 Process Control covers the most essential aspects of process control suitable for a one semester introductory course While classical techniques are discussed Chau also covers state space modeling and control a modern control topic lacking in most introductory texts MATLAB a popular engineering software package is employed as a powerful yet approachable computational tool Each chapter concludes with problem sets to which hints or solutions are provided The support website provides excellent support in the way of MATLAB outputs of text examples and MATLAB sessions references and supplementary notes **Process Dynamics and Control** Dale E. Seborg, Thomas F. Edgar, Duncan A. Mellichamp, Francis J. Doyle, III, 2016-09-13 The new 4th edition of Seborg's Process Dynamics Control provides full topical coverage for process control courses in the chemical engineering curriculum emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high value products A principal objective of this new edition is to describe modern techniques for control processes with an emphasis on complex systems necessary to the development design and operation of modern processing plants Control process instructors can cover the basic material while also having the flexibility to include advanced topics **Process-control Systems** F. Greg Shinskey, 1988 Process Control B. Wayne Bequette, 2023-07-24 Master Process Control Hands On through Updated Practical Examples and MATLAB Simulations Process Control Modeling Design and Simulation Second Edition is a complete introduction to process control and has been fully updated integrating current software tools to enable professionals and students to master critical techniques hands on through simulations based on modern versions of MATLAB This revised edition teaches the field's most important techniques behaviors and control problems with even more practical examples and exercises Wide ranging enhancements include safety considerations an expanded discussion of digital control additional process examples and updates throughout for newer versions of MATLAB and SIMULINK Fundamentals of process control and instrumentation including objectives variables block diagrams and process flowsheets Methodologies for developing dynamic models of chemical processes including compartmental models Dynamic behavior of linear systems state space models transfer function based models including conversion to state space and more Empirical and discrete time models including relationships among types of discrete models Feedback control proportional integral and derivative PID controllers and closed loop stability analysis Frequency response analysis techniques
