Process Analytical Technology for the Food Industry Colm P. O'Donnell, Colette Fagan, P.J. Cullen, 2014-11-03 The Process Analytical Technology PAT initiative aims to move from a paradigm of testing quality in to building quality in by design It can be defined as the optimal application of process analytical technologies feedback process control strategies information management tools and or product process optimization strategies Recently there have been significant advances in process sensors and in model based monitoring and control methodologies leading to enormous opportunities for improved performance of food manufacturing processes and for the quality of food products with the adoption of PAT Improvements in process efficiency reduced product variability enhanced traceability process understanding and decreased risk of contamination are some of the benefits arising from the introduction of a PAT strategy in the food industry Process Analytical Technology for the Food Industry reviews established and emerging PAT tools with potential application within the food

processing industry The book will also serve as a reference for industry researchers educators and students by providing a comprehensive insight into the objectives challenges and benefits of adopting a Process Analytical Technology strategy in the food industry

Engineering Aspects of Food Biotechnology Jose A. Teixeira, Antonio A. Vicente, 2013-08-29 Food biotechnology's typical developments and applications have occurred in the fields of genetics and in enzyme and cell based biological processes with the goal of producing and improving food ingredients and foods themselves While these developments and applications are usually well reported in terms of the underlying science there is a clear lack of information on the engineering aspects of such biotechnology based food processes Filling this gap *Engineering Aspects of Food Biotechnology* provides a comprehensive review of those aspects from the development of food processes and products to the most important unit operations implied in food biotechnological processes also including food quality control and waste management The book focuses on the use of biotechnology for the production of ingredients to be used in the food industry It addresses two relevant issues consumer's awareness of the relation between nutrition and good health and the importance of environmental sustainability in the food chain i.e production of polymers and in vitro meat A chapter on the application of process analytical technology highlights the importance of this tool for satisfying the increasingly sophisticated and strict policies for quality control and monitoring of specific process phases The book includes a detailed presentation of relevant unit operations developed to extract/purify the ingredients of biotechnological origin intended for food applications In addition to examining the contributions of biotechnology to producing and improving food ingredients the book provides a concise description of the role biotechnology plays in adding value to food processing by products including post harvest losses in relevant industries of the food sector It builds a foundation for further research and development in the food processing industry

Applied Chemometrics for Scientists Richard G. Brereton, 2007-04-02 The book introduces most of the basic tools of chemometrics including experimental design signal analysis statistical methods for analytical chemistry and multivariate methods It then discusses a number of important applications including food chemistry biological pattern recognition reaction monitoring optimisation of processes medical applications The book arises from a series of short articles that have been developed over four years on Chemweb www.chemweb.com

A Process Analytical Technology (PAT) Approach Involving Near Infrared Spectroscopy to Control the Manufacturing of an Active Pharmaceutical Ingredient Cédric Schaefer, 2013 Pharmaceutical companies are progressively adopting and introducing the Process Analytical Technology PAT concept to control and ensure in real time product quality in development and manufacturing PAT is a key component of the Quality by Design QbD framework promoted by the regulatory authorities aiming the building of product quality based on both a strong scientific background and a quality risk management approach An analytical method based on near infrared NIR spectroscopy was developed as a PAT tool to control on line an API active pharmaceutical ingredient crystallization During this process the API and residual solvent contents need to be precisely determined to reach a predefined seeding

point An original methodology based on the QbD principles was applied to conduct the development and validation of the NIR method and to ensure that it is fitted for its intended use Partial least squares PLS models were developed and optimized through chemometrics tools in order to quantify the 2 analytes of interest The method was fully validated according to the official requirements using the accuracy profile approach Besides a real time process monitoring was added to the validation phase to prove and document that the method is fitted for purpose Implementation of this method as an in process control at industrial plant from the launch of this new pharmaceutical process will enable automatic control of the crystallization step in order to ensure a predefined quality level of the API Other valuable benefits are expected such as reduction of the process time and suppression of a difficult sampling and tedious off line analyzes European Pharmacopoeia Service européen de la qualité du médicament (Éditeur scientifique),2013 **Russian Chemical Reviews** ,2006 **Industrial and Highway Sensors Technology** B.
