

ALGORITHM & FLOWCHART MANUAL for STUDENTS Part (1)

Algorithm in Programming:

In programming, algorithm is a set of well-defined instructions in sequence to solve the problem.

HOW TO WRITE ALGORITHMS:

Step 1 Define your algorithms input: Many algorithms take in data to be processed, e.g. to calculate the area of rectangle input may be the rectangle height and rectangle width.

Step 2 Define the variables: Algorithm's variables allow you to use it for more than one place. We can define two variables for rectangle height and rectangle width as HEIGHT and WIDTH (or H & W). We should use meaningful variable name e.g. instead of using H & W use HEIGHT and WIDTH as variable name.

Step 3 Outline the algorithm's operations: Use input variable for computation purpose, e.g. to find area of rectangle multiply the HEIGHT and WIDTH variable and store the value in new variable (say) AREA. An algorithm's operations can take the form of multiple steps and even branch, depending on the value of the input variables.

Step 4 Output the results of your algorithm's operations: In case of area of rectangle output will be the value stored in variable AREA, if the input variables described a rectangle with a HEIGHT of 2 and a WIDTH of 3, the algorithm would output the value of 6.

Flowchart:

Flowchart is diagrammatic /Graphical representation of sequence of steps to solve a problem. To draw a flowchart following standard symbols are use

Symbol	Purpose	Description
	Flow line	Used to indicate the flow of logic by connecting symbols.

Introduction to Algorithms Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, 2009-07-31 This edition has been revised and updated throughout. It includes some new chapters. It features improved treatment of dynamic programming and greedy algorithms, as well as a new notion of edge-based flow in the material on flow networks. 

Introduction to Algorithms, third edition Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, Clifford Stein, 2009-07-31 The latest edition of the essential text and professional reference with substantial new material on such topics as vEB trees, multithreaded algorithms, dynamic programming, and edge-based flow. Some books on algorithms are rigorous but incomplete; others cover masses of material but lack rigor. *Introduction to Algorithms* uniquely combines rigor and comprehensiveness. The book covers a broad range of algorithms in depth, yet makes their design and analysis accessible to all levels of readers. Each chapter is relatively self-contained and can be used as a unit of study. The

algorithms are described in English and in a pseudocode designed to be readable by anyone who has done a little programming. The explanations have been kept elementary without sacrificing depth of coverage or mathematical rigor. The first edition became a widely used text in universities worldwide as well as the standard reference for professionals. The second edition featured new chapters on the role of algorithms, probabilistic analysis and randomized algorithms and linear programming. The third edition has been revised and updated throughout. It includes two completely new chapters on van Emde Boas trees and multithreaded algorithms, substantial additions to the chapter on recurrence now called Divide and Conquer and an appendix on matrices. It features improved treatment of dynamic programming and greedy algorithms and a new notion of edge based flow in the material on flow networks. Many exercises and problems have been added for this edition. The international paperback edition is no longer available, the hardcover is available worldwide.

Software Design for Engineers and Scientists John Allen Robinson, 2004-08-21. *Software Design for Engineers and Scientists* integrates three core areas of computing: Software engineering including both traditional methods and the insights of extreme programming; Program design including the analysis of data structures and algorithms; Practical object oriented programming. Without assuming prior knowledge of any particular programming language and avoiding the need for students to learn from separate specialised Computer Science texts, John Robinson takes the reader from small scale programming to competence in large software projects all within one volume. Copious examples and case studies are provided in C. The book is especially suitable for undergraduates in the natural sciences and all branches of engineering who have some knowledge of computing basics and now need to understand and apply software design to tasks like data analysis, simulation, signal processing or visualisation. John Robinson introduces both software theory and its application to problem solving using a range of design principles applied to the creation of medium sized systems, providing key methods and tools for designing reliable, efficient, maintainable programs. The case studies are presented within scientific contexts to illustrate all aspects of the design process, allowing students to relate theory to real world applications. Core computing topics usually found in separate specialised texts are presented to meet the specific requirements of science and engineering students. Demonstrates good practice through applications, case studies and worked examples based in real world contexts. *CRC Concise Encyclopedia of Mathematics* Eric W. Weisstein, 2002-12-12. Upon publication the first edition of the *CRC Concise Encyclopedia of Mathematics* received overwhelming accolades for its unparalleled scope, readability and utility. It soon took its place among the top selling books in the history of Chapman Hall/CRC and its popularity continues unabated. Yet also unabated has been the demand for more. **Information Systems Architecture and Technology: Proceedings of 38th International Conference on Information Systems Architecture and Technology - ISAT 2017** Leszek Borzemski, Jerzy Świątek, Zofia Wilimowska, 2017-08-31. This three volume set of books presents advances in the development of concepts and techniques in the area of new technologies and contemporary information system architectures. It guides readers through solving specific

research and analytical problems to obtain useful knowledge and business value from the data Each chapter provides an analysis of a specific technical problem followed by the numerical analysis simulation and implementation of the solution to the problem The books constitute the refereed proceedings of the 2017 38th International Conference Information Systems Architecture and Technology or ISAT 2017 held on September 17 19 2017 in Szklarska Por ba Poland The conference was organized by the Computer Science and Management Systems Departments Faculty of Computer Science and Management Wroclaw University of Technology Poland The papers have been organized into topical parts Part I includes discourses on topics including but not limited to Artificial Intelligence Methods Knowledge Discovery and Data Mining Big Data Knowledge Discovery and Data Mining Knowledge Based Management Internet of Things Cloud Computing and High Performance Computing Distributed Computer Systems Content Delivery Networks and Service Oriented Computing Part II addresses topics including but not limited to System Modelling for Control Recognition and Decision Support Mathematical Modelling in Computer System Design Service Oriented Systems and Cloud Computing and Complex Process Modeling Part III deals with topics including but not limited to Modeling of Manufacturing Processes Modeling an Investment Decision Process Management of Innovation Management of Organization
