Association, 1997 Applied Multivariate Statistics in Geohydrology and Related Sciences Charles E. Brown, 1998-01-19 It has been evident from many years of research work in the geohydrologic sciences that a summary of relevant past work present work and needed future work in multivariate statistics with geohydrologic applications is not only desirable but is necessary This book is intended to serve a broad scientific audience but more specifically is geared toward scientists doing studies in geohydrology and related geosciences Its objective is to address both introductory and advanced concepts and applications of the multivariate procedures in use today Some of the procedures are classical in scope but others are on the forefront of statistical science and have received limited use in geohydrology or related sciences The past three decades have seen a significant jump in the application of new research methodologies that focus on analyzing large databases With more general applications being developed by statisticians in various disciplines multivariate quantitative procedures are evolving for better scientific application at a rapid rate and now provide for quick and informative analyses of large datasets The procedures include a family of statistical research methods that are alternatively called multivariate analysis or multivariate statistical methods
