Answers	Marks	Examiner's tips
1 (a) Each spring holds its brake pad retainer on the shaft at low speed. If the rotation speed is increased, the brake pad retainer moves away from the shaft and compresses the spring, which acts against the outward movement of the retainer. If the rotation speed is fast enough, the spring is unable to prevent the brake pad coming into contact with the collar. Friction between the brake pad and the collar prevents the shaft rotating any faster.	1 1 1 1	max 3 marks for (a)
(b) For no braking, the centripetal force $< 250 \text{ N}$  $\therefore m\omega_0^2 r = 250 \text{ N}$ at the maximum angular speed $\omega = 0.30 \omega_0^2 \times 0.060 = 250$ $\omega_0^2 = \frac{250}{0.30} \times 0.060 = 1.39 \times 10^4 \text{ rad}^2 \text{ s}^{-2}$ $\omega_0 = 118 \text{ rad s}^{-1}$ Maximum frequency of rotation $= \frac{\omega_0}{2\pi}$ $= 19 \text{ Hz}$	1 1 1 1	When the centripetal force exceeds $250 \text{ N}$ the spring extends outwards and, as the gap is small, braking occurs.
(c) If the springs became weaker, the tension in the springs at which the brake pads touched the collar would be less ... ... so braking would occur at a lower rotation frequency. The lifeboat would descend at a lower speed, or more friction occurs.	1 1 1	max 2 marks for (c)
2 (a) <i>Relevant points include:</i> • Speed is the magnitude of velocity (or speed is a scalar but acceleration [or velocity] is a vector). • In circular motion at constant speed the direction of motion changes continuously. • Therefore the velocity is changing. • Acceleration is the rate of change of velocity.	3	Alternatively, this can be argued as follows: • speed is the magnitude of velocity (or speed is a scalar but acceleration [or velocity] is a vector) • force (or acceleration) acts towards the centre of the circle • force (or acceleration) is always perpendicular to the velocity (or has no component in the direction of the velocity) • so the force changes the direction of the velocity but not its magnitude

The School Science Review ,2000      **Revise AS Physics for AQA A** Harvey Cole,2005-06-24 We have had lots of students contacting us to say how useful they've found this series of revision guides. So why have they found them so valuable? Students know just what they need to revise for each exam because each guide matches the specification exactly. Information is presented in a straightforward, user-friendly way. Content is organised into double-page spreads to make revision more manageable. Short questions at the end of each section really make students stop and think about the topic. Tips on common pitfalls and advice on how to tackle different types of exam question and exam preparation. Practice exam style questions are included at the end of each module. The answers to all questions are in the back of the books so students can work on their own.
