Embedded and

Real-Time Operating Systems K. C. Wang,2023-09-14 This book covers the basic concepts and principles of operating systems showing how to apply them to the design and implementation of complete operating systems for embedded and real time systems It includes all the foundational and background information on ARM architecture ARM instructions and programming toolchain for developing programs virtual machines for software implementation and testing program execution image function call conventions run time stack usage and link C programs with assembly code Embedded and Real Time Operating Systems describes the design and implementation of a complete OS for embedded systems in incremental steps explaining the design principles and implementation techniques For Symmetric Multiprocessing SMP embedded systems the author examines the ARM MPCore processors which include the SCU and GIC for interrupts routing and interprocessor communication and synchronization by Software Generated Interrupts SGIs This Second Edition covers ARM64 architecture and programming These include exception levels vector tables and exceptions handling GICv3 programming and interrupt processing It covers virtual to physical address mappings in ARMv8 and shows a 64 bit OS with kernel space in EL1 and separate user spaces in EL0 It also covers ARM TrustZone technology and secure systems These include hardware and software architectures for secure and normal worlds interactions and switching between the two worlds It shows a secure world comprising a secure monitor in EL3 to provide service functions and a normal world comprising processes in non secure EL1 which use SMC to access service functions in the secure world Throughout the book complete working sample systems demonstrate the design principles and implementation techniques The content is suitable for advanced level and graduate students working in software engineering programming and systems theory

Programming Languages and Systems Ilya Sergey,2022-03-28 This open access book constitutes the proceedings of the 31st European Symposium on Programming ESOP 2022 which was held during April 5 7 2022 in Munich Germany as part of the European Joint Conferences on Theory and Practice of Software ETAPS 2022 The 21 regular papers presented in this volume were carefully reviewed and selected from 64 submissions They deal with fundamental issues in the specification design analysis and implementation of programming languages and systems Information Security Applications Ilsun You,2020-01-24 This book constitutes the thoroughly refereed post conference proceedings of the 20th International Conference on Information Security Applications WISA 2019 held on Jeju Island South Korea in August 2019 The 29 revised full papers presented in this volume were carefully reviewed and selected from 63 submissions The primary focus of WISA 2019 was on systems and network security including all other technical and practical aspects of security application in general The papers are grouped in the following topical sections Application and Game Security Network Security and Blockchain Cryptography Security with AI and Machine Learning IoT Security Hardware Security and Selected Security Issues Designing Secure IoT Devices with the Arm Platform Security Architecture and Cortex-M33 Trevor Martin,2022-04-28 Designing Secure IoT devices with the Arm Platform Security Architecture and Cortex M33 explains how

to design and deploy secure IoT devices based on the Cortex M23 M33 processor The book is split into three parts First it introduces the Cortex M33 and its architectural design and major processor peripherals Second it shows how to design secure software and secure communications to minimize the threat of both hardware and software hacking And finally it examines common IoT cloud systems and how to design and deploy a fleet of IoT devices Example projects are provided for the Keil MDK ARM and NXP LPCXpresso tool chains Since their inception microcontrollers have been designed as functional devices with a CPU memory and peripherals that can be programmed to accomplish a huge range of tasks With the growth of internet connected devices and the Internet of Things IoT plain old microcontrollers are no longer suitable as they lack the features necessary to create both a secure and functional device The recent development by ARM of the Cortex M23 and M33 architecture is intended for today s IoT world Shows how to design secure software and secure communications using the ARM Cortex M33 based microcontrollers Explains how to write secure code to minimize vulnerabilities using the CERT C coding standard Uses the mbedTLS library to implement modern cryptography Introduces the TrustZone security peripheral PSA security model and Trusted Firmware Legal requirements and reaching device certification with PSA Certified
