Single and Two-Phase Flows on Chemical and Biomedical Engineering Ricardo Dias, Antonio A. Martins, Rui Lima, Teresa M. Mata, 2012-07-30 Single and two phase flows are ubiquitous in most natural process and engineering systems Examples of systems or process include packed bed reactors either single phase or multiphase absorber and adsorber separation columns filter beds plate heat exchangers flow of viscoelastic fluids in polymer systems or the enhanced recovery of oil among others In each case the flow plays a central role in determining the system or process behavior and performance A better understanding of the underlying physical phenomena and the ability to describe the phenomena properly are both crucial to improving design operation and control processes involving the flow of fluids ensuring that they will be more efficient and cost effective Expanding disciplines such as microfluidics and the simulation of complex flow physical systems such as blood flow in physiological networks also rely heavily on accurate predictions of fluid flow Recent advances either in computational and experimental techniques are improving the existing knowledge of single and multiphase flows in engineering and physical systems of interest This ebook is a review on the state of the art and recent advances in critical areas of fluid mechanics and transport phenomena with respect to chemical and biomedical engineering applications **The Biomedical Engineering Handbook** Joseph D. Chemical Engineering in Medicine and Biology Daniel Hershey,2013-06-04 There is much discussion today concerning Bioengineering or Biomedical Engineering It is not exactly clear what these names signify particularly in chemical engineering Some have suggested retreading the old war horse Biochemical Engineering or was it Biomedical Chemical Engineering In an effort to demonstrate the on going activities of chemical engineers in the life science area we accepted the invitation of the Industrial and Engineering Division of the American Chemical Society to organize the 33rd Annual Chemical Engineering Symposium We decided to call the symposium Chemical Engineering in Medicine and

Biology and hence avoided the problem of having to decide which bio prefix to use Many chemical engineers in the academic and industrial world were contacted From these contacts and a good deal of publicity arose the Symposium The two day meeting was held at the University of Cincinnati in the Loveland Room of the Student Union Building on October 20 21 1966 Twenty one papers were presented on topics relating chemical engineering to medicine and biology The papers were representative of the scope of the activities across the country with presenters coming from Washington California Massachusetts New York South Carolina Wisconsin Iowa Pennsylvania Michigan Indiana and Texas Topics ranged over blood flow properties diffusion in blood phenomena ix INTRODUCTION X mass transfer in the eye artificial kidney analysis separation of bacteria by ion exchange mathematical modeling of drug distribution carbon dioxide respiration photosynthetic kinetics water in frozen tissues electrophoretic separation of proteins and outer space research on life support systems
