Seed-Borne Diseases of Agricultural Crops: Detection, Diagnosis & Management Ravindra Kumar, Anuja Gupta, 2020-05-18 The global population is increasing rapidly and feeding the ever increasing population poses a serious challenge for agriculturalists around the world Seed is a basic and critical input in agriculture to ensure global food security Roughly 90 percent of the crops grown all over the world are propagated by seed However seed can also harbour and spread pathogens e g fungi bacteria nematodes viruses etc which cause devastating diseases Seed borne pathogens represent a major threat to crop establishment and yield Hence timely detection and diagnosis is a prerequisite for their effective management The book *Seed Borne Diseases of Agricultural Crops Detection Diagnosis Management* addresses key issues related to seed borne transmitted diseases in various agricultural crops Divided into 30 chapters it offers a comprehensive compilation of papers concerning the history of seed pathology importance of seed borne diseases seed borne diseases and quarantine seed health testing and certification detection and diagnosis of seed borne diseases and their phytopathogens host parasite interactions during development of seed borne diseases diversity of seed borne pathogens seed borne diseases in major agricultural crops non parasitic seed disorders mechanisms of seed transmission and seed infection storage fungi and mycotoxins impact of seed borne diseases on human and animal health and management options for seed borne diseases We wish to thank all of the eminent researchers who contributed valuable chapters to our book which will be immensely useful for students researchers academics and all those involved in various agro industries

Handbook of Molecular Biotechnology Dongyou Liu, 2024-09-05 With a history that likely dates back to the dawn of human civilization more than 10 000 years ago and a record that includes the domestication and selective breeding of plants and animals the harnessing of fermentation process for bread cheese and brewage production and the development of vaccines against infectious diseases biotechnology has acquired a molecular focus during the 20th century particularly following the resolution of DNA double helix in 1953 and the publication of DNA cloning protocol in 1973 and

transformed our concepts and practices in disease diagnosis treatment and prevention pharmaceutical and industrial manufacturing animal and plant industry and food processing While molecular biotechnology offers unlimited opportunities for improving human health and well being animal welfare agricultural innovation and environmental conservation a dearth of high quality books that have the clarity of laboratory manuals without distractive procedural details and the thoroughness of well conversed textbooks appears to dampen the enthusiasm of aspiring students In attempt to fill this glaring gap Handbook of Molecular Biotechnology includes four sections with the first three presenting in depth coverage on DNA RNA and protein technologies and the fourth highlighting their utility in biotechnology Recognizing the importance of logical reasoning and experimental verification over direct observation and simple description in biotechnological research and development the Introduction provides pertinent discussions on key strategies i e be first be better and be different effective thinking lateral parallel causal reverse and random and experimental execution which have proven invaluable in helping advance research projects evaluate and prepare research reports and enhance other scientific endeavors Key features Presents state of the art reviews on DNA RNA and protein technologies and their biotechnological applications Discusses key strategies effective thinking and experimental execution for scientific research and development Fills the gap left by detailed ridden laboratory manuals and insight lacking standard textbooks Includes expert contributions from international scientists at the forefront of molecular biotechnology research and development Written by international scientists at the forefront of molecular biotechnology research and development chapters in this volume cover the histories principles and applications of individual techniques technologies and constitute stand alone yet interlinked lectures that strive to educate as well as to entertain Besides providing an informative textbook for tertiary students in molecular biotechnology and related fields this volume serves as an indispensable roadmap for novice scientists in their efforts to acquire innovative skills and establish solid track records in molecular biotechnology and offers a contemporary reference for scholars educators and policymakers wishing to keep in touch with recent developments in molecular biotechnology

Digital Loop-Mediated Isothermal DNA Amplification Janay Elise Kong,2017 Nucleic acid amplification has applications in diagnostics sequencing genetic fingerprinting among others Currently nucleic acid amplification is treated as the gold standard method for several diagnostics however because of the multi step protocols and the large equipment these assays are lengthy and require laboratory settings Digital nucleic acid amplifications assays developed have greatly improved several aspects of nucleic acid amplification by creating a more robust and sensitive assay This is due to the reduction in background noise and the ability to effectively concentrate target analytes in nano or picoliter volumes by compartmentalization of these samples We were able to demonstrate a 69 fold fluorescence change in an isothermal nucleic acid amplification assay with a 60% increase in fluorescence stability with elevated temperatures over the time course of the reaction with the use of a unique dye combination of EvaGreen and hydroxynaphthol blue HNB Due to the improvements in signal we were able to demonstrate comparable results using a mobile phone based fluorescence plate reader as with that of a benchtop reader The unique dye combination was then applied to a digital system demonstrating signal improvements that are crucial to developing a robust assay giving a higher efficiency percentage of on wells closer to the theoretical value and a larger difference in fluorescence intensities for on versus off wells Lastly we examined the mechanism of the dye combination to best determine additional ways of improving the signal generation By sequestering EvaGreen HNB allows amplification to proceed without interference Additionally a Förster resonance energy transfer FRET interaction between the dye molecules when DNA is absent from the solution acts to lower the background fluorescence such that a greater fluorescence fold change occurs with DNA amplification The EvaGreen and HNB have a highly tuned binding affinity such that prior to DNA amplification they have FRET interactions and afterwards in the presence of large amounts of DNA EvaGreen binding to DNA becomes more favorable All of these developed technologies and methods work in conjunction to improve upon currently developed techniques for nucleic acid amplification in point of care settings Tropical Agriculture ,2018 *Development of Loop-mediated Isothermal Amplification of DNA (LAMP) for Bovine Haemorrhagic Septicaemia Caused by Pasteurella*
