Further Mathematics for Economic Analysis Knut Sydsæter, 2005

Further Mathematics for Economic Analysis By Sydsæter Hammond Seierstad and Strom

Further Mathematics for Economic Analysis is a companion volume to the highly regarded **Essential Mathematics for Economic Analysis** by Knut Sydsæter and Peter Hammond. The new book is intended for advanced undergraduate and graduate economics students whose requirements go beyond the material usually taught in undergraduate mathematics courses for economists. It presents most of the mathematical tools that are required for advanced courses in economic theory both micro and macro. This second volume has the same qualities that made the previous volume so successful. These include mathematical reliability, an appropriate balance between mathematics and economic examples, an engaging writing style, and as much mathematical rigour as possible while avoiding unnecessary complications. Like the earlier book, each major section includes worked examples as well as problems that range in difficulty from quite easy to more challenging. Suggested solutions to odd-numbered problems are provided.

Key Features: Systematic treatment of the calculus of variations, optimal control theory, and dynamic programming. Several early chapters review and extend material in the previous book on elementary matrix algebra, multivariable calculus, and static optimization. Later chapters present multiple integration as well as ordinary differential and difference equations, including systems of such equations. Other chapters include material on elementary topology in Euclidean space, correspondences, and fixed point theorems. A website is available which will include solutions to even-numbered problems, available to instructors, as well as extra problems and proofs of some of the more technical results.

Peter Hammond is Professor of Economics at Stanford University. He is a prominent theorist whose many research publications extend over several different fields of economics. For many years he has taught courses in mathematics for economists and in mathematical economics at Stanford, as well as earlier at the University of Essex and the London School of Economics. Knut Sydsæter, Atle Seierstad, and Arne Strom all have extensive experience in teaching mathematics for economists in the Department of Economics at the University of Oslo. With Peter Berck at Berkeley, Knut Sydsæter and Arne Strom have written a widely used formula book **Economists Mathematical Manual** Springer, 2000. The 1987 North-Holland book **Optimal Control Theory for Economists** by Atle Seierstad and Knut Sydsæter is still a standard reference in the field.
