Building on the core foundations of Anthropological Economics: Our second tranche of extensions on Anthropological Economics Sujay Rao Mandavilli, 2026-01-10 The concepts of anthropological economics were introduced by us in the year 2020 in a paper entitled *Introducing Anthropological Economics* The quest for an Anthropological basis for Economic theory growth models and policy development for wealth and human welfare maximization and was published in the journal *ELK Asia Pacific Journal of Social Sciences* Volume 6 Issue 3 April June 2020 The paper was subsequently published in Google books later in the same year Subsequently several other papers were also published The objective of our

work on anthropological economics has been to attempt to merge the concepts and theoretical frameworks of the disciplines of Anthropology and Economics thereby creating a new sub field in Economics called Anthropological Economics which is mired in Anthropological concepts and principles and sought to maximize not only human welfare and happiness but also wealth maximization across cultures while considering both the psychic unity of man universal human needs and culturespecific factors Thus the field of Anthropological Economics is expected to be inter related to other disciplines of Economics but remain complementary to them i e it is not expected that it would intrude into other sub fields of economics replace them or override their principles in any way It would therefore we anticipated draw upon other aspects of economic theory and enrich them suitably It is therefore expected that all aspects of Economic theory would be taken into consideration for policy formulation and decision making including those of Anthropological economics and independent context specific judgment would always be applied The new and novel proposed field of Anthropological Economics proposes to take the idea of Human Welfare to its logical conclusion by extending the work already carried out in various sub disciplines of economics such as those proposed by Amartya Sen and others and integrate it more tightly with various concepts in Anthropology Many new tools and techniques have therefore been proposed as a part of our overall work and we believe these would suitably enrich the field of Economics as well While many attempts have been made in the past to integrate the fields of Anthropology and Economics we hope anticipate expect and believe that 3 our endeavour would take this exercise to a much higher level by creating a new generation of Anthroeconomists We also hope that it will eventually help move mainstream economics away from Neo classical approaches what we prefer to call legacy economics at this point in time to Anthropological and human centric approaches The present volume presents our second tranche of additional and auxiliary concepts in anthropological economics The present volume must be read after the contents of the first two previous volumes have been fully read and ingested We say this in the interests of absolute reader clarity This is because the original paper and the previous extensions have not been reproduced here
