Singhal, Nikolai Borisjuk, 2023-10-03 In the last 50 years classical breeding has played a significant role in achieving higher
crop productivity but major crops have reached a plateau in their yield potential Therefore the current focus for sustainable
intensification of agriculture is the use of biotechnological approaches to enhance the yield potential by combating the yield
losses that occur due to abiotic stresses The abiotic stresses are governed by multigenes and therefore a holistic approach is
needed to get success in imparting stress tolerance to enhance the yield potential of our crops Plants face multiple stress
conditions during their life stages and adopt several physiological biochemical and molecular strategies to combat that which
are sometimes not sufficient to survive particularly crop plants The climate change era has created a need to understand the
abiotic stresses in a holistic way Therefore a deep understanding of multiple abiotic stress mechanisms is necessary to
develop crops tolerant to climate fluctuation With this background the outline of this book covers the following features
Agriculture sustainability and molecular understanding of multiple stress tolerance Systems biology for life history strategies
conventional and genomic approaches above and underground Genetic resources and molecular understanding of seed
