Max V Altera:

On the Physical Security of Physically Unclonable Functions Shahin Tajik, 2018-03-27 This book investigates the susceptibility of intrinsic physically unclonable function PUF implementations on reconfigurable hardware to optical semi-invasive attacks from the chip backside. It explores different classes of optical attacks, particularly photonic emission analysis, laser fault injection, and optical contactless probing. By applying these techniques, the book demonstrates that the secrets generated by a PUF can be predicted, manipulated, or directly probed without affecting the behavior of the PUF. It subsequently discusses the cost and feasibility of launching such attacks against the very latest hardware technologies in a real scenario. The author discusses why PUFs are not tamper-evident in their current configuration and therefore PUFs alone cannot raise the security level of key storage. The author then reviews the potential and already implemented countermeasures which can remedy PUFs' security-related shortcomings and make them resistant to optical side-channel and optical fault attacks. Lastly, by making selected modifications to the functionality of an existing PUF architecture, the book presents a prototype tamper-evident sensor for detecting optical contactless probing attempts.

Advanced VLSI Design and Testability Issues Suman Lata Tripathi, Sobhit Saxena, Sushanta Kumar Mohapatra, 2020-08-18 This book facilitates the VLSI interested individuals with not only in-depth knowledge but also the broad aspects of it by explaining its applications in different fields, including image processing and biomedical. The deep understanding of basic concepts gives you the power to develop a new application aspect which is very well taken care of in this book by using simple language in explaining the concepts. In the VLSI world, the importance of hardware description languages cannot be ignored as the designing of such dense and complex circuits is not possible without them. Both Verilog and VHDL languages are used here for designing. The current needs of high-performance integrated circuits (ICs) including low-power devices and new emerging materials which can play a very important role in achieving new functionalities are the most interesting part of the book. The testing of VLSI circuits becomes more crucial than the designing of the circuits in this nanometer technology era. The role of fault simulation algorithms is very well explained, and its implementation using Verilog is the key aspect of this book. This book is well organized into 20 chapters. Chapter 1 emphasizes on uses of FPGA on various image processing and biomedical applications. Then the descriptions enlighten the basic understanding of digital design from the perspective of HDL. In Chapters 2-5, the performance enhancement with alternate material or geometry for silicon-based FET designs is focused. Chapters 6 and 7 describe the study of bimolecular interactions with biosensing FETs. Chapters 8-13 deal with advanced FET structures available in various shapes, materials such as nanowire HFET, and their comparison in terms of device performance metrics calculation. Chapters 14-18 describe different application-specific VLSI design techniques and challenges for analog and digital circuit designs. Chapter 19 explains the VLSI testability issues with the description of simulation and its categorization into logic and fault simulation for test pattern generation using Verilog HDL. Chapter 20

deals with a secured VLSI design with hardware obfuscation by hiding the IC's structure and function which makes it much more difficult to reverse engineer

Field Programmable Logic and Applications

Patrick Lysaght, James Irvine, Reiner Hartenstein, 2004-06-22 This book contains the papers presented at the 9th International Workshop on Field Programmable Logic and Applications FPL 99 hosted by the University of Strathclyde in Glasgow Scotland August 30 September 1 1999 FPL 99 is the ninth in the series of annual FPL workshops The FPL 99 programme committee has been fortunate to have received a large number of high quality papers addressing a wide range of topics From these 33 papers have been selected for presentation at the workshop and a further 32 papers have been accepted for the poster sessions A total of 65 papers from 20 countries are included in this volume FPL is a subject area that attracts researchers from both

electronic engineering and computer science Whether we are engaged in research into software or hardware seems to be primarily a question of perspective What is unquestionable is that the interaction of groups of researchers from different backgrounds results in stimulating and productive research As we prepare for the new millennium the premier European forum for researchers in field programmable logic remains the FPL workshop Next year the FPL series of workshops will celebrate its tenth anniversary The contribution of so many overseas researchers has been a particularly attractive feature of these events giving them a truly international perspective while the informal and convivial atmosphere that pervades the workshops have been their hallmark We look forward to preserving these features in the future while continuing to expand the size and quality of the events
