Duncan, Richard L. London, 2014-06 **Credit Risk: Modeling, Valuation and Hedging** Tomasz R. Bielecki, Marek Rutkowski, 2013-03-14 Mathematical finance and financial engineering have been rapidly expanding fields of science over the past three decades The main reason behind this phenomenon has been the success of sophisticated quantitative methodologies in helping professionals manage financial risks It is expected that the newly developed credit derivatives industry will also benefit from the use of advanced mathematics This industry has grown around the need to handle credit risk which is one of the fundamental factors of financial risk In recent years we have witnessed a tremendous acceleration in research efforts aimed at better comprehending modeling and hedging this kind of risk Although in the first chapter we provide a brief overview of issues related to credit risk our goal was to introduce the basic concepts and related notation rather than to describe the financial and economical aspects of this important sector of financial market The interested reader may consult for instance Francis et al 1999 or Nelken 1999 for a much more exhaustive description of the credit derivatives industry
