Advances in Machine Learning and Data Science Damodar Reddy Edla, Pawan Lingras, Venkatanaresbhabu K., 2018-05-16  
The Volume of Advances in Machine Learning and Data Science Recent Achievements and Research Directives constitutes the proceedings of First International Conference on Latest Advances in Machine Learning and Data Science LAMDA 2017. The 37 regular papers presented in this volume were carefully reviewed and selected from 123 submissions. These days we find many computer programs that exhibit various useful learning methods and commercial applications. Goal of machine learning is to develop computer programs that can learn from experience. Machine learning involves knowledge from various disciplines like statistics, information theory, artificial intelligence, computational complexity, cognitive science, and biology. For problems like handwriting recognition, algorithms that are based on machine learning outperform all other approaches. Both machine learning and data science are interrelated. Data science is an umbrella term to be used for techniques that clean data and extract useful information from data. In the field of data science, machine learning algorithms are used frequently to identify valuable knowledge from commercial databases containing records of different industries, financial transactions, medical records, etc. The main objective of this book is to provide an overview on latest advancements in the field of machine learning and data science with solutions to problems in the field of image, video, data, and graph processing, pattern recognition, data structuring, data clustering, pattern mining, association rule-based approaches, feature extraction techniques, neural networks, bio-inspired learning, and various machine learning algorithms.

Machine Learning Proceedings 1989 Inductive Databases and Constraint-Based Data Mining Sašo Džeroski, Bart Goethals, Panče Panov, 2010-11-18 This book is about inductive databases and constraint based data mining emerging research topics lying at the intersection of data mining and database research The aim of the book as to provide an overview of the state of the art in this novel and citing research area Of special interest are the recent methods for constraint based mining of global models for prediction and clustering the unification of pattern mining approaches through constraint programming the clarification of the relationship between mining local patterns and global models and the proposed inductive frameworks and approaches for inductive databases On the application side applications to practically relevant problems from bioinformatics are presented

Inductive databases IDBs represent a database view on data mining and knowledge discovery IDBs contain not only data but also generalizations patterns and models valid in the data In an IDB ordinary queries can be used to access and manipulate data while inductive queries can be used to generate mine manipulate and apply patterns and models In the IDB framework patterns and models become first class citizens and KDD becomes an extended querying process in which both the data and the patterns models that hold in the data are queried
