Antoulas, 2009-06-25 Mathematical models are used to simulate and sometimes control the behavior of physical and artificial processes such as the weather and very large scale integration VLSI circuits The increasing need for accuracy has led to the development of highly complex models However in the presence of limited computational accuracy and storage capabilities model reduction system approximation is often necessary [Approximation of Large Scale Dynamical Systems](#) provides a comprehensive picture of model reduction combining system theory with numerical linear algebra and computational considerations It addresses the issue of model reduction and the resulting trade offs between accuracy and complexity Special attention is given to numerical aspects simulation questions and practical applications [Dissertation Abstracts International](#), 2008 *Energy Research Abstracts*, 1993 **NASA SP-7500** United States. for the state of the fields which they cover as determined by contributing developments at various times and in many places Considering the sustained growth of mathematics itself as well as the intensive use of an ever increasing number of its branches in diversified applied contexts the availability of such surveys in selected areas is believed to fill a real need The present articles are therefore aimed not so much at research specialists actively contributing to the subjects discussed as they are aimed at a broader mathematically literate audience looking for contemporary information on the important problems and results in these disciplines whether it be for use in classroom and seminar or for the sake of possible application to problems in other fields of science and engineering or simply for reasons of personal interest The selection of the areas surveyed as well as their coverage was further guided by giving first consideration to developments of whose current state no comprehensive picture could be obtained by going only to the readily accessible literature in familiar languages It is a unique distinction of the mathematical community to have never been taken in by the myth now generally shattered that Russian science merely followed the lead of the West at a respectful distance Mathematicians remained aware of the vigorous development during the postwar years of research in their field also in the Communist countries and they knew of the steady stream of important results which they produced
