The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise look no further. In addition to print sources The New Walford naturally covers an extensive range of e-reference sources such as digital databanks digital reference services electronic journal collections meta search engines networked information services open archives resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature. This ensures that The New Walford is clear easy to use and intuitive.

Computer Networking Problems and Solutions cuts through the issues facing modern networks in a unique way explaining why computer networks and protocols are designed the way they are by explaining the set of problems any network protocol or system must overcome then considering the common solutions to those problems and finally providing examples of these solutions as implemented in protocols both old and new. This book is arranged in three sections each covering a different set of problems and solutions. The first section considers data transport or the data plane. The second covers the protocols used to discover and use topology and reachability information or the control plane. The third considers some common network designs and architectures including data center fabrics MPLS cores and software defined wide area networks SD WAN. The principles that underlie such technologies as Software Defined Networks SDNs are considered throughout the book as solutions to the common problem set all networking technologies face.
