Electro-optical System Design, Simulation, Testing, and Training Richard M. Wasserman,Scott Lawrence DeVore,2002 The past few years have seen an upsurge in the numbers of known Neolithic settlements in Ireland Many of these sites have been excavated by archaeologists based in field units but few are well known to the wider archaeological community The papers in this volume were presented at a conference held at Queen s University Belfast in 2001 which provided a forum for a discussion of the new Neolithic material from Ireland in its wider geographical context Although the bulk of the emerging Irish settlement evidence relates to substantial houses many of these papers consider wider themes including issues of contact and communication along the sea routes and coastal margins of north west Europe questions of diversity and regional patterns of sedentism and mobility and variations in regional food production strategies

Development of Coherent Detector Technologies for Sub-Millimetre Wave Astronomy Observations Boon Kok Tan,2015-09-15 The thesis describes the development of receiver technologies for sub millimetre astronomy instruments focusing on high performance coherent cryogenic detectors operating close to the superconductor gap frequency The mixer chip which comprises the SIS devices fed by a unilateral finline and matching planar circuits was fabricated on 15 micron silicon substrate using the recently developed Silicon On Insulator SOI technology This offered broadband IF and RF performance with fully integrated on chip planar circuits resulting in an easily reproducible mixer chip and a simple mixer block An important consequence of this design is that it can be extended to the supra THz region and making the fabrication of multi pixel heterodyne arrays feasible The extension of the operation of major telescopes such as ALMA APEX and the GLT from single pixel to large format arrays is the subject of extensive research at present time since it will allow fast mapping
