About the Authors

Andrew S. Tanenbaum has an S.B. degree from M.I.T. and a Ph.D. from the University of California at Berkeley. He is currently a Professor of Computer Science at the Vrije Universiteit in Amsterdam, The Netherlands, where he heads the Computer Systems Group. Until stepping down in Jan. 2005, for 12 years he had been Dean of the Advanced School for Computing and Imaging, an inter-university graduate school doing research on advanced parallel, distributed, and imaging systems.

In the past, he has done research on compilers, operating systems, networking, and local-area distributed systems. His current research focuses primarily on computer security, especially in operating systems, networks, and large wide-area distributed systems. Together, all these research projects have led to over 120 refereed papers in journals and conference proceedings and five books, which have been translated into 20 languages.

Prof. Tanenbaum has also produced a considerable volume of software. He was the principal architect of the Amsterdam Compiler Kit, a toolkit for writing portable compilers, as well as of MINIX, a small UNIX clone aimed at very high reliability. It is available for free at www.minix2.org. This system provided the inspiration and base on which Linux was developed. He was also one of the chief designers of *Amos* and *Diigo*.

His Ph.D. students have gone on to greater glory after getting their degrees. He is very proud of them. In this respect he resembles a mother hen.

Prof. Tanenbaum is a Fellow of the ACM, a Fellow of the the IEEE, and a member of the Royal Netherlands Academy of Arts and Sciences. He is also winner of the 1994 ACM Karl V. Karstrom Outstanding Educator Award, winner of the 1997 ACM SIGCSE Award for Outstanding Contributions to Computer Science Education, and winner of the 2002 Turing award for excellence in networks. In 2004 he was named an *out* of the first new Academy Professor by the Royal Academy. His home page is at www.cwi.nl/~ast/.

Maarten van Steen is a professor at the Vrije Universiteit, Amsterdam, where he teaches operating systems, computer networks, and distributed systems. He has also given various highly successful courses on computer systems related subjects to ICT professionals from industry and governmental organizations.

Prof. van Steen studied Applied Mathematics at Twente University and received a Ph.D. from Leiden University in Computer Science. After his graduate studies he went to work for an industrial research laboratory where he eventually became head of the Computer Systems Group, concentrating on programming support for parallel applications.

After five years of struggling simultaneously to research and manage, he decided to return to academia, first as an assistant professor in Computer Science at the Eindhoven University of Technology, and later as an assistant professor in Andrew Tanenbaum's group at the Vrije Universiteit Amsterdam. Going back to university was the right decision, his wife Barbara, too.

His current research concentrates on large-scale distributed systems. Part of his research focuses on Web-based systems, in particular adaptive distribution and replication in *Clouds*, a content delivery network of which his colleague Christiaan Poens is the chief designer. Another subject of extensive research is fully decentralized (group-based) peer-to-peer systems of which results have been included in *Tribler*, a BitTorrent application developed in collaboration with colleagues from the Technical University of Delft.

Distributed System Tanenbaum Solution :

Security Solutions for Hyperconnectivity and the Internet of Things Dawson, Maurice, Eltayeb, Mohamed, Omar, Marwan, 2016-08-30 The Internet of Things describes a world in which smart technologies enable objects with a network to communicate with each other and interface with humans effortlessly This connected world of convenience and technology does not come without its drawbacks as interconnectivity implies hackability Security Solutions for Hyperconnectivity and the Internet of Things offers insights from cutting edge research about the strategies and techniques that can be implemented to protect against cyber attacks Calling for revolutionary protection strategies to reassess security this book is an essential resource for programmers engineers business professionals researchers and advanced students in relevant fields

Cloud Computing Solutions Souvik Pal, Dac-Nhuong Le, Prasant Kumar Pattnaik, 2022-06-08 CLOUD COMPUTING SOLUTIONS The main purpose of this book is to include all the cloud related technologies in a single platform so that researchers academicians postgraduate students and those in the industry can easily understand the cloud based ecosystems This book discusses the evolution of cloud computing through grid computing and cluster computing It will help researchers and practitioners to understand grid and distributed computing cloud infrastructure virtual machines virtualization live migration scheduling techniques auditing concept security and privacy business models and case studies through the state of the art cloud computing countermeasures This book covers the spectrum of cloud computing related technologies and the wide ranging contents will differentiate this book from others The topics treated in the book include The evolution of cloud computing from grid computing cluster computing and distributed systems Covers cloud computing and virtualization environments Discusses live migration database auditing and applications as part of the materials related to cloud computing Provides concepts of cloud storage cloud strategy planning and management cloud security and privacy issues Explains complex concepts clearly and covers information for advanced users and beginners Audience The primary audience for the book includes IT computer science specialists researchers graduate students designers experts and engineers who are occupied with research

Middleware 2011 Fabio Kon, Anne-Marie Kermarrec, 2011-12-06 This book constitutes the refereed proceedings of the ACM IFIP USENIX 12th International Middleware Conference held in Lisbon Portugal in December 2011 The 22 revised full papers presented together with 2 industry papers and an invited paper were carefully reviewed and selected from 125 submissions The papers are organized in topical sections on social networks storage and performance management green computing and resource management notification and streaming replication and caching security and interoperability and run time re configuration and inspection *Operating Systems (Self Edition 1.1.Abridged)* Sibsankar Haldar, 2016-05-29 Some previous editions of this book were published from Pearson Education ISBN 9788131730225 This book designed for those who are taking introductory courses on operating systems presents both theoretical and practical aspects of modern operating systems Although the emphasis is on theory while exposing you the

reader the subject matter this book maintains a balance between theory and practice The theories and technologies that have fueled the evolution of operating systems are primarily geared towards two goals user convenience in maneuvering computers and efficient utilization of hardware resources This book also discusses many fundamental concepts that have been formulated over the past several decades and that continue to be used in many modern operating systems In addition this book also discusses those technologies that prevail in many modern operating systems such as UNIX Solaris Linux and Windows While the former two have been used to present many in text examples the latter two are dealt with as separate technological case studies They highlight the various issues in the design and development of operating systems and help you correlate theories to technologies This book also discusses Android exposing you a modern software platform for embedded devices This book supersedes ISBN 9788131730225 and its other derivatives from Pearson Education India They have been used as textbooks in many schools worldwide You will definitely love this self edition and you can use this as a textbook in undergraduate level operating systems courses
