,2015-03-28 Issue 06 Jan Feb Mar 2015 Physical Mesomechanics And Spectrum Of Metal Surface Layer Excitation At Friction Process With Heavy Loading A Kh Janahmadov N G Javadov The paper reviews the physical mesomechanics of structurally inhomogeneous media developed on the verge of continuum mechanics macro level and physics of plasticity and strength of deformable solids micro level According to the concept of the structural level of deformation at friction the surface layer of deformable solids is an independent leading functional subsystem It is shown that with an increase of the deformation level of material it develops autonomous processes plasticity waves inside which have a significant impact on the staginess of plasticity flow localization and the destruction of contacting bodies at the meso level the deformation has a transitional rotational character Influence Of Wingtips On Induced Drag Force Of Rectangular Wing R M Jafarzade M H Ilyasov J N Huseynli The paper examines the influence of wingtips on the inductive resistance of rectangular wing through the mathematical model based on the distribution of vortices Assuming that the free vortices originate at the wingtips the imaginary shape vortex diagram is built above the wing at the height of wingtips The air is considered to be incompressible Referring to the Biot Savart formula the expression for the inductive velocity generated by the free vortices and their average values along the wingspan are found The induced drag force and its coefficient are determined through the average bevel angle of flow The inductive drag force is analytically proven Application Of Coordination Polymers To Increase The Reservoir Oil Recovery B T Usubaliev E E Ramazanova F T Murvatov E N Aliyev Y S Salakhova M K Munshieva F B Aliyev A K Rzaeva It is first time when an application of composite materials BAF 1 BAF 2 on the basis of the coordination polymers is studied to improve the rheological properties of crude oil It has been established that composite materials reduce the oil viscosity by 60 70% and also have a positive effect on other properties Relaxation Of The Non Equilibrium Field Effect In In_2O_3 SiO_2 Si SiO_2 Al Structures At The Non Equilibrium Depletion Regimes A Z Badalov Sh G Zeynalova The article studies in detail the effect of various factors on the screening time of In_2O_3 SiO_2 Si SiO_2 Al structures the influence of the lighting temperature and the supply voltage on the duration of the non equilibrium non stationary depletion process It is also examines the dependence of the current depolarization on the power supply impulse duration with and without exposure to the LED light The Theoretical Analysis Of Crude Oil Vapour Pressure And Cavitation Technologies Studying Of Physical And Chemical Properties Of Transported Oil In The Course Of Cavitation S K Gezalov We have worked out the criterion of fuzzy interval for minimizing target function with fuzzy coefficient The given criterion shows adaptability of genetic algorithms for building pare to optimal solutions of multi objective problem of transport logistics with fuzzy coefficient of objectives **Mathematical Introduction to Data Science** Sven A. Wegner,2024-08-30 This textbook is intended for students of mathematics who have completed the foundational courses of their undergraduate studies and now want to specialize in Data Science and Machine Learning It introduces the reader to the most important topics in the latter areas focusing on rigorous proofs and a systematic understanding of the underlying ideas The textbook comes with 121 classroom tested exercises Topics covered

include k nearest neighbors linear and logistic regression clustering best fit subspaces principal component analysis dimensionality reduction collaborative filtering perceptron support vector machines the kernel method gradient descent and neural networks *Handbook of Sinc Numerical Methods* Frank Stenger, 2016-04-19 Handbook of Sinc Numerical Methods presents an ideal road map for handling general numeric problems Reflecting the author's advances with Sinc since 1995 the text most notably provides a detailed exposition of the Sinc separation of variables method for numerically solving the full range of partial differential equations PDEs of interest to scientists and engineers This new theory which combines Sinc convolution with the boundary integral equation IE approach makes for exponentially faster convergence to solutions of differential equations The basis for the approach is the Sinc method of approximating almost every type of operation stemming from calculus via easily computed matrices of very low dimension The downloadable resources of this handbook contain roughly 450 MATLAB programs corresponding to exponentially convergent numerical algorithms for solving nearly every computational problem of science and engineering While the book makes Sinc methods accessible to users wanting to bypass the complete theory it also offers sufficient theoretical details for readers who do want a full working understanding of this exciting area of numerical analysis **23rd Annual Symposium on Foundations of Computer Science**, 1982

Proceedings of the Genetic and Evolutionary Computation Conference, 2000 **Hilbert Space Splittings and Iterative Methods** Michael Griebel, Peter Oswald, 2024-11-06 This book is about the theory of so called Schwarz methods for solving variational problems in a Hilbert space V arising from linear equations and their associated quadratic minimization problems Schwarz methods are based on the construction of a sequence of approximate solutions by solving auxiliary variational problems on a set of smaller finite dimensional Hilbert spaces V_i in a certain order combining them and using the combined approximations in an iterative procedure The spaces V_i form a so called space splitting for V they need not necessarily be subspaces of V and their number can be finite or infinite The convergence behavior of Schwarz methods is influenced by certain properties of the space splittings they are based on These properties are identified and a detailed treatment of traditional deterministic and more recent greedy and stochastic orderings in the subproblem solution process is given together with an investigation of accelerated methods To illustrate the abstract theory the numerical linear algebra analogs of the iterative methods covered in the book are discussed Its standard application to the convergence theory of multilevel and domain decomposition methods for solving PDE problems is explained and links to optimization theory and online learning algorithms are given Providing an introduction and overview of iterative methods which are based on problem decompositions and suitable for parallel and distributed computing the book could serve as the basis for a one or two semester course for M S and Ph D students specializing in numerical analysis and scientific computing It will also appeal to a wide range of researchers interested in scientific computing in the broadest sense Proceedings of the ...
