Data Science Foundations Fionn Murtagh, 2017-09-22 Data Science Foundations is most welcome and indeed a piece of literature that the field is very much in need of quite different from most data analytics texts which largely ignore foundational concepts and simply present a cookbook of methods a very useful text and I would certainly use it in my teaching Mark Girolami Warwick University Data Science encompasses the traditional disciplines of mathematics statistics data analysis machine learning and pattern recognition This book is designed to provide a new framework for Data Science based on a solid foundation in mathematics and computational science It is written in an accessible style for readers who are engaged with the subject but not necessarily experts in all aspects It includes a wide range of case studies from diverse fields and seeks to inspire and motivate the reader with respect to data associated information and derived knowledge

Parallel Computing for Data Science Norman Matloff, 2015-06-04 This is one of the first parallel computing books to focus exclusively on parallel data structures algorithms software tools and applications in data science The book prepares readers to write effective parallel code in various languages and learn more about different R packages and other tools It covers the classic n observations p variables matrix format and common data structures Many examples illustrate the range of issues encountered in parallel programming

[Big Data and High Performance Computing](#) L. Grandinetti, G.R. Joubert, M. Kunze, 2015-10-20 Big Data has been much in the news in recent

years and the advantages conferred by the collection and analysis of large datasets in fields such as marketing medicine and finance have led to claims that almost any real world problem could be solved if sufficient data were available This is of course a very simplistic view and the usefulness of collecting processing and storing large datasets must always be seen in terms of the communication processing and storage capabilities of the computing platforms available This book presents papers from the International Research Workshop Advanced High Performance Computing Systems held in Cetraro Italy in July 2014 The papers selected for publication here discuss fundamental aspects of the definition of Big Data as well as considerations from practice where complex datasets are collected processed and stored The concepts problems methodologies and solutions presented are of much more general applicability than may be suggested by the particular application areas considered As a result the book will be of interest to all those whose work involves the processing of very large data sets exascale computing and the emerging fields of data science
