Failure Analysis of Shaft with Step and Keyway Discontinuities under Combined Loading Ashish Kumar Singh, 2018-05-30. This E-book is a master's dissertation on Failure Analysis of Shaft with Step and Keyway Discontinuities Under Combined Loading, submitted in May 2018. In all power transmission elements, shaft is almost used in every machine or in every mechanical system. Shaft is a rotating machine element commonly in circular cross section, is used to transmit power and rotational motion to other parts such as gears, pulleys, flywheels, sprockets and clutches. Various elements which are used to transmit power from the driving device (motor or engine) are mounted on the shaft with the help of keys. Design of shaft is a very important part in mechanical design. In real life, the shaft is subjected to combined loading. A shaft often fails due to the stress concentration in discontinuity areas, resulting into large stress values. The most common discontinuities present in the shafts are grooves, slots, shoulders, fillets, holes, thread, etc. Due to the presence of these geometrical discontinuities, the stresses are concentrated in discontinuity areas, thereby reducing its strength. In the present work, an effort is made to calculate the equivalent stresses and maximum shear stresses developed in shaft due to step and presence of keyways, either single or multiple. These stresses are determined analytically and using finite element analysis (FEA) subjected to combined loading. The modelling of shaft with single keyway (rectangular, square, tapered, semi-circular) is carried out using CREO software and FEA is carried out in ANSYS. Further, the stresses are also determined for shaft with double keyways (rectangular, semi-circular) and stepped shaft with single and double rectangular keyways. Symmetrical and non-symmetrical orientations of double keyways in shaft are also modelled and analysed. It is concluded that rectangular keyway in solid shaft is best among all the modelled and analyzed keyways in shaft as far as the concern of equivalent and shear stresses and in case of both rectangular and semi-circular keyways, double symmetrical keyways in solid shaft are more suitable than non-symmetrical keyways under combined loading conditions. It is also concluded

that double symmetrical keyways in stepped shaft is more suitable than non symmetrical keyway under combined loading conditions due to less generation of stresses **Proceedings of International Conference on Intelligent Manufacturing and Automation** Hari Vasudevan, Vijaya Kumar N. Kottur, Amool A. Raina, 2020-06-30 This book gathers selected papers presented at the Second International Conference on Intelligent Manufacturing and Automation ICIMA 2020 which was jointly organized by the Departments of Mechanical Engineering and Production Engineering at Dwarkadas J Sanghvi College of Engineering DJSCE Mumbai and by the Indian Society of Manufacturing Engineers ISME Covering a range of topics in intelligent manufacturing automation advanced materials and design it focuses on the latest advances in e.g. CAD CAM CAE CIM FMS in manufacturing artificial intelligence in manufacturing IoT in manufacturing product design development DFM DFA FMEA MEMS nanotechnology rapid prototyping computational techniques nano micro machining sustainable manufacturing industrial engineering manufacturing process management modelling optimization techniques CRM MRP ERP green lean agile manufacturing logistics supply chain management quality assurance environmental protection advanced material processing characterization of composite smart materials The book is intended as a reference guide for future researchers and as a valuable resource for students in graduate and doctoral programmes **Micro turbo expander**

design for small scale ORC Lorenzo Talluri, 2020-12-01 The Tesla expander was first developed by N Tesla at the beginning of the 20th century In recent years due to the increasing appeal towards micro power generation and energy recovery from wasted flows this cost effective expander technology rose a renovated interest In the present study a 2D numerical model is realized and a design procedure of a Tesla turbine for ORC applications is proposed A throughout optimization method is developed by evaluating the losses of each component The 2D model results are further exploited through the development of 3D computational investigation which allows an accurate comprehension of the flow characteristics Finally two prototypes are designed realized and tested The former one is designed to work with air as working fluid The second prototype is designed to work with organic fluids The achieved experimental results confirmed the validity and the large potential applicative chances of this emerging technology in the field of micro sizes low inlet temperature and low expansion ratios
