

## Physics Project Report on Polarisation of Light

### Introduction towards Project Report

**Polarisation** - Light is a transverse wave consisting of vibrations normal to the direction of propagation. The lack of symmetry of vibration around the direction of wave propagation is called polarisation.

Polarisation is the only phenomenon which proves that light is a transverse wave. On the other hand the sound waves are longitudinal waves and do not show polarisation.

**Unpolarised light** - If the vibrations of electric vector can take place in all possible directions, perpendicular to direction of propagation then the light is said to be unpolarised light.

e.g. light from a ordinary source of light is

unpolarised.
