Planetary Systems Raymond T. Pierrehumbert, 2021-12-09 Not long ago the Solar System was the only example of a planetary system a star and the bodies orbiting it that we knew Now we know thousands of planetary systems and have even been able to observe planetary systems at the moment of their birth This Very Short Introduction explores this new frontier incorporating the latest research The book takes the reader on a journey through the grand sweep of time from the moment galaxies begin to form after the Big Bang to trillions of years in the future when the Universe will be a dilute soup of dim galaxies populated mostly by red dwarf stars Throughout Raymond T. Pierrehumbert introduces the latest insights gained from a new generation of telescopes that catch planetary systems at the moment of formation and to the theoretical advances that attempt to make sense of these observations He explains how the elements that make up life and the planets on which life can live are forged in the interiors of dying stars and make their way into rocky planets He also explores the vast array of newly discovered planets orbiting stars other than our own and explains the factors that determine their climates Finally he reveals what determines how long planetary systems can live and what happens in their end times Very Short Introductions Brilliant Sharp Inspiring ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized

Capitalism in the Anthropocene John Bellamy Foster,2022-08-23 Over the last 11 700 years during which human civilization developed the earth has existed within what geologists refer to as the Holocene Epoch Now science is telling us that the Holocene Epoch in the geological time scale ended replaced by the onset of a new more dangerous Anthropocene Epoch which began around

1950 The Anthropocene Epoch is characterized by an anthropogenic rift in the biological cycles of the Earth System marking a changed reality in which human activities are now the main geological force impacting the earth as a whole generating at the same time an existential crisis for the world's population. What caused this massive shift in the history of the earth? In this comprehensive study, John Bellamy Foster tells us that a globalized system of capital accumulation has induced humanity to foul its own nest. The result is a planetary emergency that threatens all present and future generations, throwing into question the continuation of civilization and ultimately the very survival of humanity itself. Only by addressing the social aspects of the current planetary emergency, exploring the theoretical, historical, and practical dimensions of the capitalism's alteration of the planetary environment, is it possible to develop the ecological and social resources for a new journey of hope.
