# Three Theories of the Solar System

Investigate the three theories that describe the formation of the solar system.

In the geocentric theory, the Earth is at the center of the solar system. The Sun, Moon, and planets revolve around the Earth. This theory was widely accepted until the 16th century when Copernicus proposed the heliocentric theory.

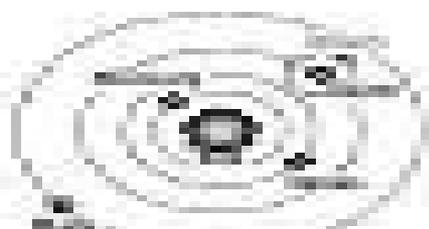

According to Copernicus, the Sun is at the center of the solar system and the planets revolve around it. This theory was widely accepted until the 17th century when Galileo proposed the geocentric theory. Galileo's theory was based on the observation that the stars are fixed in position and do not move. He also observed that the planets move in straight lines across the sky. This theory was widely accepted until the 17th century when Copernicus proposed the heliocentric theory.
