

## Grounded Theory and the Constant Comparative Method: Valid Research Strategies for Educators

Sharon M. Kolb

*Grounded theory was developed by Glaser and Strauss who believed that theory could emerge through qualitative data analysis. In grounded theory, the researcher uses multiple stages of collecting, refining, and categorizing the data. The researcher uses the strategies of the making constant comparisons and applying theoretical sampling to obtain a theory grounded in the data. The justification of this paper is to provide discussion on the validity of grounded theory and the constant comparative method as effective research strategies for educators. The qualitative design of grounded theory will be the focus of this paper, along with a discussion of the constant comparative method, issues related to trustworthiness, and limitations inherent in grounded theory methodology.*

### INTRODUCTION

Grounded theory is one of four qualitative designs frequently used in the human and social sciences; the other designs are ethnographies, case studies, and phenomenological studies. The major difference between grounded theory and the other designs is the emphasis on theory development (Denzin & Lincoln, 2005). The qualitative design of grounded theory will be the focus of this paper, along with a discussion of the constant comparative method, issues related to trustworthiness, and limitations inherent in grounded theory methodology.

Grounded theory was developed by Barney Glaser and Anselm Strauss who believed that theory could emerge through qualitative data analysis (Strauss & Corbin, 1990). In grounded theory the researcher uses multiple stages of collecting, refining, and categorizing the data (Strauss & Corbin). As identified in the literature, making constant comparisons and applying theoretical sampling are necessary strategies used for developing grounded theory (Creswell, 2007; Locke, 1996; Strauss & Corbin; Taylor & Bogdan, 1998).

### Constant Comparative Method

The constant comparative method is used by the researcher to develop concepts from the data by coding and analyzing at the same time (Taylor & Bogdan, 1998). The constant comparative method "combines systematic data collection, coding, and analysis with theoretical sampling in order to generate theory that is integrated, close to the data, and expressed in a form clear enough for further testing" (Conrad, Neumann, Haworth, & Scott, 1995, p. 280). Constant comparative methodology incorporates four stages: "(1) comparing incidents

applicable to each category, (2) integrating categories and their properties, (3) delimiting the theory, and (4) writing the theory" (Glaser & Strauss, 1967, p. 105). Throughout the four stages of the constant comparative method, the researcher continually sorts through the data collection, analyzes and codes the information, and reinforces theory generation through the process of theoretical sampling. The benefit of using this method is that the research begins with raw data; through constant comparisons a substantive theory will emerge (Glaser & Strauss). Grounded theory is a labor-intensive task that requires the researcher to invest time in the processes of analysis and data collection.

### DATA COLLECTION

Data can be collected from observations, interviews or other research sessions (Bogdan & Biklen, 2006). During the process of gathering data the researcher can employ a variety of methods to elicit information pertaining to the study. The techniques commonly identified in the literature for collecting data are document collecting, participant observing, and interviewing (Glesne & Peshkin, 1992).

### Document Collecting

Collecting written documents provide a source of information such as meeting dates or events as well as in-depth descriptions of how individuals think about their world. The research examines written documents to gain a deeper understanding and description of the participant's convictions, conduct, and experiences (Bogdan & Biklen, 2006). Glesne and Peshkin stress the value of document collecting in corroborating observations and interviews and generating further trustworthiness among data (1992).

**The Oxford Handbook of Identities in Organizations** Andrew D. Brown, 2020-01-09 Conceived as the meanings that individuals attach to their selves a substantial stockpile of theory related to identities accumulated across the arts social sciences and humanities over many decades continues to nourish contemporary research on self identities in organizations In times which are more reflexive narcissistic and fluid the identities of participants in organizations are increasingly less fixed and less certain making identity issues both more salient and more interesting Particular attention has been given to processes of identity construction often styled identity work Research has focused on how why and when such processes occur and their implications for organizing and individual group and organizational outcomes This has resulted in a burgeoning stream of research from discursive dramaturgical symbolic socio cognitive and psychodynamic perspectives that most often casts individuals efforts to fabricate identities as intentional relational and consequential Seemingly intractable debates centred on the nature of identities their relative stability or fluidity whether they are best regarded as coherent or fractured positive or not and how they are fabricated within relations of power combined with other conceptual issues continue to invigorate the field However these debates have also led to some scepticism regarding the future potential of identities research Yet as the chapters in this Handbook demonstrate there are considerable grounds for optimism that identity as root metaphor nexus concept and means to bridge levels of analysis has significant potential to generate multiple compelling streams of theorizing in organization and management studies
