Props+ E. R. Petersen,1994 **Risk and Decision Analysis in Projects** John R. Schuyler,2001 Some of Schuyler s tried and true tips include The single point estimate is almost always wrong so that it is always better to express judgments as ranges A probability distribution completely expresses someone s judgment about the likelihood of values within the range We often need a single value cost or other assessment and the expected value mean of the distribution is the only unbiased predictor Expected value is the probability weighted average and this statistical idea is the cornerstone of decision analysis Some decisions are easy perhaps aided by quick decision tree calculations on the back of an envelope Decision dilemmas typically involve risky outcomes many factors and the best alternatives having comparable value We only need analysis sufficient to confidently identify the best alternative As soon as you know what to do stop the analysis Be alert to ways to beneficially change project risks We can often eliminate avoid transfer or mitigate threats in some way Get to know the people who make their living helping managers sidestep risk They include insurance agents partners turnkey contractors accountants trainers and safety personnel

Systems and Decision Making Hans G. Daellenbach,1994-10-11 Systems and Decision Making A Management Science Approach Hans G Daellenbach University of Canterbury Christchurch New Zealand Traditional methods of problem solving based on the cause and effect model can no longer cope with the complex situations in which decisions have to be made today These problem situations occur within a systems context Most of these systems are created and controlled by humans and it is therefore important that decision making is guided by a systematic and

comprehensive methodology that helps the decision maker to make effective use of his/her extensive but limited powers of reasoning. Systems and Decision Making combines contemporary systems work with Operations Research. Daellenbach places an emphasis on developing a methodology for decision situations that lend themselves to quantitative approaches rather than give an elementary survey of many OR/MS techniques. It incorporates some of the learnings of soft systems methodology for more practical problem solving, particularly at the problem identification and formulation stages. The text also shows that the scientific component of modelling can be considerably enhanced by the use of various diagrammatic devices. The second part of the book studies a number of topics important for the analyst, such as how to deal with the time element, with constraints, with uncertainty, and with multiple goals. These are demonstrated by various OR/MS techniques. Systems and Decision Making is an excellent core text for undergraduate and graduate students of systems management science and MBA courses.

Decision Support and Expert Systems Efraim Turban, 1995. Decision support systems, management support systems, an overview, decision making, systems modeling and support, data management, modeling and model management, user interface, constructing a decision support system, organizational DSS and advanced topics, enterprise support systems, Group decision support systems, executive information and support systems, fundamentals of artificial intelligence and expert systems, applied artificial intelligence, an overview, fundamentals of expert systems, knowledge acquisition and validation, knowledge representation, inferences, explanations, and uncertainty, building expert systems, process and tools, cutting edge decision support technologies, neural computing, the basics, neural computing applications, genetic algorithms, and fuzzy logic, integrating and implementation, integrating decision support technologies, Implementing management support systems, organizational and societal impacts of management support systems, appendix, and student project.

Quantitative Business Modeling Jack R. Meredith, Scott M. Shafer, Efraim Turban, 2002. Rather than giving instruction in models and solving problems, this textbook focuses on the process of modeling and the use of models in analyzing various managerial situations. The process of modeling is highly relevant to all business disciplines and is a critical skill for all professionals. The emphasis of this text will be on the integration and development of modeling skills, including problem recognition, data collection, model formulation, analysis, and communicating and implementing the results.
