**An Introduction to Nonlinear Analysis** Martin Schechter, 2004 The techniques that can be used to solve non linear problems are far different than those that are used to solve linear problems Many courses in analysis and applied mathematics attack linear cases simply because they are easier to solve and do not require a large theoretical background in order to approach them Professor Schechter s 2005 book is devoted to non linear methods using the least background material possible and the simplest linear techniques An understanding of the tools for solving non linear problems is developed whilst demonstrating their application to problems in one dimension and then leading to higher dimensions The reader is guided using simple exposition and proof assuming a minimal set of pre requisites For completion a set of appendices covering essential basics in functional analysis and metric spaces is included making this ideal as an accompanying text on an upper undergraduate or graduate course or even for self study

**Applied Nonlinear Analysis** Jean-Pierre Aubin, Ivar Ekeland, 2006-01-01 Nonlinear analysis formerly a subsidiary of linear analysis has advanced as an individual discipline with its own methods and applications Moreover students can now approach this highly active field without the preliminaries of linear analysis As this text demonstrates the concepts of nonlinear analysis are simple their proofs direct and their applications clear No prerequisites are necessary beyond the elementary theory of Hilbert spaces indeed many of the most interesting results lie in Euclidean spaces In order to remain at an introductory level this volume refrains from delving into technical difficulties and sophisticated results not in current use Applications are explained as soon as possible and theoretical aspects are geared toward practical use Topics range from very smooth functions to nonsmooth ones from convex variational problems to nonconvex ones and from economics to mechanics Background notes comments bibliography and indexes supplement the text
