Davis Statistics And Data Analysis In Geology:

Statistics and Data Analysis in Geology John C. Davis, 2011 Special Features Offers a comprehensive treatment of statistics in geology Topics progress from background information to analysis of geological sequences then maps and finally multivariate observations The book places special emphasis on probability and statistics including nonparametric statistics constant sum data eigenvalue calculations analysis of directional data mapping and geostatistics fractals and multivariate analysis The text now includes numerous geological data sets that illustrate how specific computational procedures can be applied to problems in the Earth sciences All data sets are available on the book's companion Web site Each chapter now ends with a set of exercises of greater or lesser complexity that the student can address using methods discussed in the chapter Provides expanded coverage of elementary probability theory The discussion of nonparametric methods has been expanded to address closure effects Coverage of eigenvalues and eigenvectors has been revised Includes a new section on singular value decomposition and the relationship between R and Q mode factor methods in the chapter on multivariate analysis The section on contour mapping has been revised to reflect modern practices Includes revised coverage of the many varieties of kriging and provides a series of simple demonstrations that illustrate how geostatistical methodologies work Includes a discussion of fractals a promising area of future research The section on regression has been expanded to include several variants that have special significance in the Earth sciences

McCammon, 2012-12-06 A two week summer short course entitled Current Statistical Methods in Geology supported by the National Science Foundation was held at the University of Illinois at Chicago Circle in Chicago Illinois from June 19 to June 30 1972 The aim of the short course was to bridge the gap between the traditional first courses in statistics offered at

most educational institutions and geostatistics as it is being developed by geologists and statisticians engaged in the application of statistics in geology. The course was intended for geology college teachers who were either then teaching or preparing to teach a course within their department dealing with computer applications and the use of statistical methods in geology. This book arose out of the class notes which were prepared by the course director and the invited lecturers. We are grateful to the 28 teachers who attended for their enthusiastic interest and thoughtful responses to the many statistical concepts presented to them as geologists during the two weeks of the course. I am deeply grateful to my graduate assistants Richard Kolb and Andrea Krivz for the long hours spent in collating the course materials, testing the various computer programs and instructing the participants in the use of computer BASIC.
