Handbook of Optofluidics Aaron R. Hawkins, Holger Schmidt, 2010-03-19

Optofluidics is an emerging field that involves the use of fluids to modify optical properties and the use of optical devices to detect flowing media. Ultimately its value is highly dependent on the successful integration of photonic integrated circuits with microfluidic or nanofluidic systems. Handbook of Optofluidics provides a snapshot of the s

Bio-based Solutions for Sustainable Development of Agriculture, Volume II Eduardo V. Soares, Helena M. V. M. Soares, Spyridon Alexandros Petropoulos, 2024-11-26

The agricultural industry is primarily driven by the fast growth of the population and the subsequent need to supply sufficient food globally. It is estimated that the global population will expand from 8 billion to about 9 billion in 2050 and crop production needs to double in order to supply enough food for all people by 2050. Moreover, the climate change and the intensification of areas of infertile and unproductive soil create new and additional difficulties. It is urgent and of utter importance to find alternative practices to the traditional ones based on the indiscriminate use of various synthetic chemicals, e.g. fertilizers and pesticides, which are mainly used nowadays to overcome current and future agricultural challenges in a natural, more efficient and sustainable way. Recent regulations, EU 1009/2019 and Farm Bill in EU and USA respectively, promote the adoption of biostimulants in agriculture and open the market for new and innovative solutions. This regulation is a major step forward that should encourage the scientific community in strict interaction with the industry in the continuous development of new bio-based solutions for modern agriculture.
