Laya, Vlad-loan Bratu, Jan Markendahl, 2013 Machine to Machine M2M communications refers to the automate exchange of information between devices for control and monitoring applications This type of communication is not new since automated systems have been present for more than three decades However miniaturization of device s size reduction of production costs and drop in communication fees altogether with the massive adoption of real time access of information in current society are expanding the set of applications and solutions currently under consideration The real complexity relies on the fact that M2M is not only an add on communication solution like the case of traditional human centric broadband communications M2M usually entails a change in the core business of an industry since the relationship with external partners and the internal tasks can be radically modified In this paper we anaylise the players involved in M2M communications and how they position themselves in a market which requires them to adjust their traditional business approach The main question addressed in this work refers to which players are investing in M2M which is their view and how could their approach affect the current ICT sector We highlight the dominance and relationship between different actors and also look at barriers that prevent investments regulations in the area and standardization efforts **Research EU.** ,2010

Secured Authentication System for Internet of Things Gowtham Mohan, 2024-04-19 Academic Paper from the year 2024 in the subject Computer Sciences Internet of Things IOT grade A Free University of Berlin The National Institute of Engineering Mysore course Ph D language English abstract The key objectives defined in this thesis are given as follows To analyse the different security breaches in the IoT Ecosystem To develop a lightweight cryptographic scheme for secured Authentication in IoT To develop a multilevel security model by using Enhanced Cryptosystem for secured Authentication in IoT To ensure reliable and secure communication and access across multiple co operatively communicating devices in IoT ecosystems ensuring optimal security and authentication system is must Though IoT demands ensuring security and authentication for both device level security and data security under communication Noticeably the device level security addresses attack resilience from any unwanted or unexpected intruder by applying certain authentication variables or key agreement policies However in the last few years the events pertaining to smart card loss attack SCLA Brute Force attack impersonation attack data sniffing attack etc have questioned major at hand security solutions The irony is in the majority of IoT systems the access information or the key agreement information is saved or preserved onto the local memory which often broadens the horizon for data loss or attack In such classical approaches the possibility of SCLA Impersonation and Brute force attack can t be neglected And therefore ensuring both system level access authentication is inevitable In other words strengthening data security in IoT systems is equally significant like device level security and authentication Once system considers both data level security as well as device level authentication system retaining quality of content and hardware efficiency becomes equally inevitable On the other hand maintaining efficacy of the security system with higher authentication correctness amongst the gateways and communication devices is must It demands a collaborative low cost or

lightweight security model to enable security while maintaining IoT expectations like low computation lightweight computation low power consumption better data quality attack resilience and fast in response It can be considered as the key driving force behind this research Fifth IEE International Conference on 3G Mobile Communication Technologies (3G 2004) ,2004 3G 2004 was the premier technical forum for 3G mobile and related technologies in it s fifth successful year The conference brought together researchers and technologists from manufacturers service providers operators application developers regulators and standards bodies to share the latest information and promote the development of 3G services systems and networks Southern African Wireless Communications ,2008 *RUSI Defence Systems* ,2006 **Microwave Journal** ,2008
