T. Black, Ronald A. Kohser, 2017-12-04 Newly revised DeGarmo's Materials and Processes in Manufacturing has been the market leading text on manufacturing and manufacturing processes courses for over fifty years. Authors J. T. Black and Ron Kohser have continued this book's long and distinguished tradition of exceedingly clear presentation and highly practical approach to materials and processes, presenting mathematical models and analytical equations only when they enhance the basic understanding of the material. [Handbook of Ceramics Grinding and Polishing](#) Ioan D. Marinescu, Toshiro Doi, Eckart Uhlmann, 2015-11-19 Handbook of Ceramics Grinding and Polishing meets the growing need in manufacturing industries for a clear understanding of the latest techniques in ceramics processing. The properties of ceramics make them very useful as components; they withstand high temperatures and are durable, resistant to wear, chemical degradation, and light. In recent years, the use of ceramics has been expanding with applications in most industry sectors that use machined parts, especially where corrosion resistance is required and in high temperature environments. However, they are challenging to produce, and their use in high precision manufacturing often requires adjustments to be made at the micro and nano scale. This book helps ceramics component producers to do cost-effective, highly precise machining. It provides a thorough grounding in the fundamentals of ceramics, their properties and characteristics, and of the abrasive processes used to manipulate their final shape, as well as the test procedures vital for success. The second edition has been updated throughout with the latest developments in technologies, techniques, and materials. The practical nature of the book has also been enhanced: numerous case studies illustrating how manufacturing machining problems have been handled are complemented by a highly practical new chapter on the selection and efficient use of machine tools. Provides readers with experience-based insights into complex

and expensive processes leading to improved quality control lower failure rates and cost savings Covers the fundamentals of ceramics side by side with processing issues and machinery selection making this book an invaluable guide for downstream sectors evaluating the use of ceramics as well as those involved in the manufacturing of structural ceramics Numerous case studies from a wide range of applications automotive aerospace electronics medical devices

**Microfabrication and Nanomanufacturing** Mark J. Jackson, 2005-11-10 Nanotechnology seen as the next leap forward in the industrial revolution requires that manufacturers develop processes that revolutionize the way small products are made Microfabrication and Nanomanufacturing focuses on the technology of fabrication and manufacturing of engineering materials at these levels The book provides an overview of techniques used in the semiconductor industry It also discusses scaling and manufacturing processes operating at the nanoscale for non semiconductor applications the construction of nanoscale components using established lithographic techniques bulk and surface micromachining techniques used for etching machining and molding procedures and manufacturing techniques such as injection molding and hot embossing This authoritative compilation describes non traditional micro and nanoscale processing that uses a newly developed technique called pulsed water jet machining as well as the efficient removal of materials using optical energy Additional chapters focus on the development of nanoscale processes for producing products other than semiconductors the use of abrasive particles embedded in porous tools and the deposition and application of nanocrystalline diamond Economic factors are also presented and concern the promotion and commercialization of micro and nanoscale products and how demand will eventually drive the market
