Managing Business Complexity Michael J. North, Charles M. Macal, 2007-03-01 Agent based modeling and simulation ABMS a way to simulate a large number of choices

by individual actors is one of the most exciting practical developments in business modeling since the invention of relational databases. It represents a new way to understand data and generate information that has never been available before a way for businesses to view the future and to understand and anticipate the likely effects of their decisions on their markets and industries. It thus promises to have far reaching effects on the way that businesses in many areas use computers to support practical decision making. *Managing Business Complexity* is the first complete business oriented agent based modeling and simulation resource. It has three purposes: first to teach readers how to think about ABMS that is about agents and their interactions; second to teach readers how to explain the features and advantages of ABMS to other people; and third to teach readers how to actually implement ABMS by building agent based simulations. It is intended to be a complete ABMS resource accessible to readers who haven't had any previous experience in building agent based simulations or any other kinds of models for that matter. It is also a collection of ABMS business applications resources all assembled in one place for the first time. In short *Managing Business Complexity* addresses who needs ABMS and why, where and when ABMS can be applied to the everyday business problems that surround us and how specifically to build these powerful agent based models.

Enterprise Security Architecture Using IBM Tivoli Security Solutions Axel Buecker, Ana Veronica Carreno, Norman Field, Christopher Hockings, Daniel Kawer, Sujit Mohanty, Guilherme Monteiro, IBM Redbooks, 2007-08-07. This IBM Redbooks publication reviews the overall Tivoli Enterprise Security Architecture. It focuses on the integration of audit and compliance, access control, identity management and federation throughout extensive e-business enterprise implementations. The available security product diversity in the marketplace challenges everyone in charge of designing single secure solutions or an overall enterprise security architecture. With Access Manager, Identity Manager, Federated Identity Manager, Security Compliance Manager, Security Operations Manager, Directory Server and Directory Integrator, Tivoli offers a complete set of products designed to address these challenges. This book describes the major logical and physical components of each of the Tivoli products. It also depicts several e-business scenarios with different security challenges and requirements. By matching the desired Tivoli security product criteria, this publication describes the appropriate security implementations that meet the targeted requirements. This book is a valuable resource for security officers, administrators and architects who want to understand and implement enterprise security following architectural guidelines. *Managing Business Process Flow* Ravi Anupindi, 1998-10. **Managing the New Bank Technology** Marilyn R.
