**Host Stars and their Effects on Exoplanet Atmospheres** Jeffrey Linsky, 2019-05-23 Like planets in our solar system exoplanets form evolve and interact with their host stars in many ways As exoplanets acquire material and grow to the final size their atmospheres are subjected to intense UV and X radiation and high energy particle bombardment from the young host star Whether a planet can retain its atmosphere and the conditions for significant mass loss both depend upon the strength of the host star's high energy radiation and wind the distance of the exoplanet from its host star the gravitational potential of the exoplanet and the initial chemical composition of the exoplanet atmosphere This introductory overview describes the physical processes responsible for the emission of radiation and acceleration of winds of host stars that together control the environment of an exoplanet focusing on topics that are critically important for understanding exoplanetary atmospheres but are usually not posed from the perspective of host stars Accordingly both host stars and exoplanets are not studied in isolation but are treated as integrated systems Stellar magnetic fields which are the energy source for activity phenomena including high energy radiation and winds play a critical role in determining whether exoplanets are habitable This text is primarily for researchers and graduate students who are studying exoplanet atmospheres and habitability but who may not have a background in the physics and phenomenology of host stars

that provide the environment in which exoplanets evolve It provides a comprehensive overview of this broad topic rather than going deeply into many technical aspects but includes a large list of references to guide those interested in pursuing these questions Nonspecialists with a scientific background should also find this text a valuable resource for understanding the critical issues of contemporary exoplanet research

**Sterne und Weltraum** ,2002 **Extrasolar Planets and Astrobiology** Caleb A. Scharf,2009 This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology This book offers an advanced introduction to the increasingly robust fields of extrasolar planets and astrobiology No other text currently available applies this level of mathematics and physics while also providing an extensive grounding in key issues of chemistry biology and geophysics With extensive references to the literature and chapter ending exercises this book can be used as the core text for teaching undergraduate or introductory graduate level courses The text will also provide astrobiologists with an indispensable User s Manual when quick reference to key mathematical and physical techniques is needed A continually updated online component fully cross referenced with the text is also available Foreword by Geoff Marcy

*Exoplanets* C. R. Kitchin,2011-12-02 Exoplanets Finding Exploring and Understanding Alien Worlds probes the basis for possible answers to the fundamentals questions asked about these planets orbiting stars other than our Sun This book examines what such planets might be like where they are and how we find them Until around ten years ago the only planets that we knew about were within the Solar System The first genuine planet beyond the confines of the Solar System was discovered only 1988 Since then another 350 or so exoplanets have been detected by various methods and most of these haven been found in the last ten years Although many more exoplanets discoveries may be expected to occur even as this book is being read a large enough data set is now available to form the basis for an informed general account of exoplanets The topic hence is an extremely hot one all the more so because the recently launched Kepler spacecraft should soon start uncovering many more exoplanets some perhaps comparable with the Earth and therefore possibly alternative homes for mankind if we could ever reach them Exoplanets Finding Exploring and Understanding Alien Life gives a comprehensive balances and above all accurate account of exoplanets

Exoplanet Atmospheres Sara Seager,2010-08-22 Describes the basic physical processes including radiative transfer molecular absorption and chemical processes common to all planetary atmospheres as well as the transit eclipse and thermal phase variation observations that are unique to exoplanets
