error list message or trap it provides an explanation of the cause a discussion of the effect on the system and suggestions for
corrective action or response **Development of a Method for Incorporating Fault Codes in Prognostic Analysis** Eric
Allen Strong,2014 Information from fault codes associated with a component may be used as an indicator of its health A fault
code is defined as a timestamp at which a component is not operating according to recommended guidelines The type of fault
codes which are relevant for this analysis represent mild or moderate deviations from normal behavior rather than those
requiring immediate repair Potentially fault codes may be used to determine the Remaining Useful Life RUL of a component
by predicting its failure time which will improve safety and reduce maintenance costs associated with the component In this
dissertation methods have been developed to integrate the degradation information from fault codes into an existing
prognostic parameter to improve the estimation of RUL Optimization methods such as gradient descent were used to weight
each fault code based on their relevance to degradation Furthermore topic models a document analysis and clustering
technique were used as both a dimension reduction method and fault mode isolation Methods developed for this dissertation
were applied to two real world data sets an actuator system and monitored signals from a motor accelerated degradation
experiment The best estimation of RUL for the actuator system was a topic model with a mean absolute error of 6 41% of the
data received and the best estimation of RUL for the motor accelerated degradation experiment was 5 7% of the average
lifetime of the motors The primary contributions of this research includes a method to construct a prognostic parameter from
fault codes alone the integration of degradation information from fault codes into an existing prognostic parameter the use of
topic models in reliability analysis of fault codes and a software suite that performs these functions on generic data sets
