Advanced Applied Physics Solutions:

Ideas, Institutions, and Interests Peter W.B. Phillips, David Castle, 2022-03-31 Canada's thirteen provinces and territories are significant actors in Canadian society directly shaping cultural, political, and economic domains. Regions also play a key role in creating diversity within innovative activity. The role of provinces and territories in setting science, technology, and innovation policy is however notably underexplored. *Ideas, Institutions, and Interests* examines each province and territory to offer real-world insights into the complexity and opportunities of regionally differentiated innovation policy in a pan-continental system. Contributing scholars detail the distinctive ways in which provinces and territories articulate ideas and interests through their institutions, programs, and policies. Many of the contributing authors have engaged first-hand with either micro or macro-level policy innovation and are innovation leaders in their own right, providing invaluable perspectives on the topic. Exploring the vital role of provinces in the last thirty years of science, technology, and innovation policy development and implementation, *Ideas, Institutions, and Interests* is an insightful book that places innovation policy in the context of multilevel governance.

Reviews Of Accelerator Science And Technology - Volume 4: Accelerator Applications In Industry And The Environment Alexander Wu, Chao, Weiren Chou, 2012-02-20 Since their debut in the late 1920s, particle accelerators have evolved into a backbone for the development of science and technology in modern society. Of about 30,000 accelerators at work in the world today, a majority is for applications in industry, about 20,000 systems worldwide. There are two major categories of industrial applications: materials processing and treatment, and materials analysis. Materials processing and treatment includes ion implantation, semiconductor materials, metals, ceramics, etc., and electron beam irradiation, sterilization of medical devices, food pasteurization, treatment of carcasses and tires, cross-linking of polymers, cutting and welding, curing of composites, etc.

Materials analysis covers ion beam analysis IBA non destructive detection using photons and neutrons as well as accelerator mass spectrometry AMS All the products that are processed treated and inspected using beams from particle accelerators are estimated to have a collective value of US 500 billion per annum worldwide Accelerators are also applied for environment protection such as purifying drinking water treating waste water disinfecting sewage sludge and removing pollutants from flue gases Industrial accelerators continue to evolve in terms of new applications qualities and capabilities and reduction of their costs Breakthroughs are encountered whenever a new product is made or an existing product becomes more cost effective Their impact on our society continues to grow with the potential to address key issues in economics or the society of today This volume contains fourteen articles all authored by renowned scientists in their respective fields
