Introduction

In recent years the media has widely publicized incidences of sexual assault where the perpetrators have used drugs to debilitate the persons they assault. While this is not a new phenomenon, drug-facilitated sexual assault has only recently become widely recognized. Yet the most common

and prevalent date rape drug, alcohol, is still not readily recognized as a tool used by perpetrators.^{1,2} In fact, almost half of the sexual assaults that young adults experience take place under the influence of alcohol. The use of date rape drugs clearly illustrates how sexual assaults are planned and premeditated events. Perpetrators of sexual assault use date rape drugs as a method to incapacitate their victim and to ensure that she/he will not be able to resist the assault. In addition, using date rape drugs ensures that the survivor will not recall enough details about the assault to prosecute the perpetrator. The most well known date rape drug is flunitrazepam, which is more commonly known as "rohypnol," "roofies," or "the forget pill." Rohypnol's effects vary depending on the dosage that one is given, but they range from sedation to stage-4 coma (rohypnol is ten times more potent than valium). After consuming the drug, it takes 20-30 minutes before its sedative effects begin, and the effects can last from 8-24 hours. As well as being a strong sedative, it also causes short-term memory loss. Together these properties make rohypnol a dangerous date rape drug, and when it is mixed with alcohol it is even more dangerous because it can lead to severe intoxication and even death.

Gamma-hydroxybutyrate (GHB) is a fairly common drug with a variety of side effects, and thus has a wide range of users. For instance, some weightlifters use it for its muscle growth enhancing properties, some recreational drug users take it in combination with other drugs, and some individuals use it for its prosexual side effects (such as disinhibition and heightened sense of touch). It is inexpensive and easy to synthesize. GHB takes 15-20 minutes to begin having sedative effects that can last a couple of hours. High dosages can have negative side effects such as vomiting, respiratory depression,

Sexual and Physical Violence in Australian Punk and Hardcore Music Scenes Ash Barnes, 2025-02-18 Focused on the Australian punk and hardcore music scene this book provides an innovative balance between the

acknowledgement of harm and the celebration of pleasure in live music spaces Despite decades of advocacy within vibrant music communities stories of sexual and physical violence persist Although anecdotally common in alternative music cultures the interpretation and experiences of harm have remained absent from criminological analysis Gradients of harm dictate and frame certain behaviour as unacceptable or encouraged under specific social conditions As explored through qualitative research interviews and the author's lived experience violence within music scenes is a complex personal and collective experience Issues such as discrimination social inequality stereotyping and rape myth acceptance are instrumental in shaping how people in the punk and hardcore scenes fail to recognise minimize and dismiss violence in their community This text questions how and why some people are worthy or unworthy victims of crime and why harmful behaviour continues within these spaces Sexual and Physical Violence in Australian Punk and Hardcore Music Scenes will be of interest to researchers in the field of criminology and sociology but is also applicable to a wider academic audience interested in violence deviance and subcultures
