Handbook of Nature-Inspired Optimization Algorithms: The State of the Art Ali Wagdy Mohamed, Diego Oliva, Ponnuthurai Nagarathnam Suganthan, 2022-09-03. This book presents recent contributions and significant developments, advanced issues, and challenges in real-world problems and applications. Most optimization problems involve different types of constraints. These are called constrained optimization problems (COPs). The optimization of constrained optimization problems is considered a challenging task since the optimum solution must be feasible. In their original design, evolutionary algorithms (EAs) are able to solve unconstrained optimization problems effectively. As a result, in the past decade, many researchers have developed a variety of constraint-handling techniques incorporated into EAs' designs to counter this deficiency. The main objective of this book is to make available a self-contained collection of modern research addressing the general constrained optimization problems in many real-world applications using nature-inspired optimization algorithms. This book is suitable for a graduate class on optimization but will also be useful for interested senior students working on their research projects.
