Digital Processing and Reconstruction of Complex Signals Predrag B. Petrovic, Milorad R. Stevanovic, 2010-03-21 In real electronic systems voltage and current signals are not necessarily of a periodical quantity due to the presence of nonharmonic components or and possible stochastic variation This book presents in three parts methods for analyzing and processing and reconstructing complex signals The first part of this book is

dedicated to the problem of measurements of the basic electric quantities in electric utilities both from the aspect of accuracy of this type of measurements and the possibilities of simple and practical realization The second part presents a reconstruction of trigonometric polynomials a specific class of band limited signals from a number of integrated values of input signals The third part deals with the problem of estimating the value of the active power of the ac signal in the presence of subharmonics and interharmonics The analysis makes use of the most general model of the voltage and current signal i e the most complex spectral content that can be expected to appear in practice

Enabling Technologies for High Spectral-efficiency Coherent Optical Communication Networks Xiang Zhou,Chongjin Xie,2016-04-29 Enabling Technologies for High Spectral efficiency Coherent Optical Communication Networks Presents the technological advancements that enable high spectral efficiency and high capacity fiber optic communication systems and networks This book examines key technology advances in high spectral efficiency fiber optic communication systems and networks enabled by the use of coherent detection and digital signal processing DSP The first of this book s 16 chapters is a detailed introduction Chapter 2 reviews the modulation formats while Chapter 3 focuses on detection and error correction technologies for coherent optical communication systems Chapters 4 and 5 are devoted to Nyquist WDM and orthogonal frequency division multiplexing OFDM In chapter 6 polarization and nonlinear impairments in coherent optical communication systems are discussed The fiber nonlinear effects in a non dispersion managed system are covered in chapter 7 Chapter 8 describes linear impairment equalization and Chapter 9 discusses various nonlinear mitigation techniques Signal synchronization is covered in Chapters 10 and 11 Chapter 12 describes the main constraints put on the DSP algorithms by the hardware structure Chapter 13 addresses the fundamental concepts and recent progress of photonic integration Optical performance monitoring and elastic optical network technology are the subjects of Chapters 14 and 15 Finally Chapter 16 discusses spatial division multiplexing and MIMO processing technology a potential solution to solve the capacity limit of single mode fibers Contains basic theories and up to date technology advancements in each chapter Describes how capacity approaching coding schemes based on low density parity check LDPC and spatially coupled LDPC codes can be constructed by combining iterative demodulation and decoding Demonstrates that fiber nonlinearities can be accurately described by some analytical models such as GN EGN model Presents impairment equalization and mitigation techniques Enabling Technologies for High Spectral efficiency Coherent Optical Communication Networks is a reference for researchers engineers and graduate students
