API-614

Lubrication, Shaft-sealing, and Oil-control Systems and Auxiliaries

API 614 is not intended to inhibit a vendor from offering, or the purchaser from accepting, alternative equipment or engineering solutions for the individual application. This may be particularly appropriate where there is innovative or developing technology. Where an alternative is offered, the vendor should identify any variations from API 614 and provide details.

Scope (6th Edition, February 2022)

API 614 covers the minimum requirements for lubrication systems, oil-type shaft-sealing systems, oil-control systems, and auxiliaries, excluding dry gas seal systems and fuel systems. These systems can serve individual equipment such as compressors, gears, pumps, and drivers or complete trains. API 614 does not apply to dry gas seal systems. *For dry gas seal systems, refer to API 692.*

4.3 A bullet (•) at the beginning of a section or subsection *indicates that either a decision is required or further information is to be provided by the purchaser. This information should be indicated in the data sheets; otherwise, it should be stated in the quotation request or in the purchase order.*

4.4 A diamond (♦) at the beginning of a section or subsection indicates that the feature is required for unspared equipment in critical service.

NOTE Sections and subsections preceded by a diamond (♦) are those features and requirements described as "special purpose" oil systems in previous editions of API 614.

4.5 If specified by the purchaser, all sections and subsections preceded by a diamond (♦) shall apply to the oil system.

4.6 Stand-alone lube-oil systems for drivers and gears may be used if the driven machines need a dedicated lube-oil system, or if the driven equipment does not need a lube-oil system.

NOTE Some examples are electric motors driving oil flooded screw compressors or reciprocating compressors and steam turbines driving fans, pumps, or generators.
