Chemical Engineering Computation with MATLAB® Yeong Koo Yeo, 2017-08-01 Most problems encountered in chemical engineering are sophisticated and interdisciplinary. Thus it is important for today's engineering students, researchers, and professionals to be proficient in the use of software tools for problem solving. MATLAB is one such tool that is distinguished by the ability to perform calculations in vector/matrix form, a large library of built-in functions, a strong structural language, and a rich set of graphical visualization tools. Furthermore, MATLAB integrates computations, visualization, and programming in an intuitive, user-friendly environment. *Chemical Engineering Computation with MATLAB* presents basic to advanced levels of problem-solving techniques using MATLAB as the computation environment. The book provides examples and problems extracted from core chemical engineering subject areas and presents a basic instruction in the use of MATLAB for problem solving. It provides many examples and exercises and extensive problem-solving instructions and solutions for various problems. Solutions are developed using fundamental principles to construct mathematical models, and an equation-oriented approach is used to generate numerical results. A wealth of examples demonstrate the implementation of various problem-solving approaches and methodologies for problem formulation, problem-solving analysis, and presentation, as well as visualization and documentation of results. This book also provides aid with advanced problems that are often encountered in graduate research and industrial operations, such as nonlinear regression, parameter estimation in differential systems, two-point boundary value problems, and partial differential equations and optimization.

Applied Optimization with MATLAB Programming P. Venkataraman, 2009-03-23 Technology Engineering Mechanical Provides all the tools needed to begin solving optimization problems using MATLAB. The Second Edition of *Applied Optimization with MATLAB Programming* enables readers to harness all the features of MATLAB to solve optimization problems using a variety of linear and nonlinear design optimization techniques. By breaking down complex mathematical concepts into simple ideas and offering plenty of easy-to-follow examples, this text is an ideal introduction to the field. Examples come from all engineering disciplines as well as science, economics, operations research, and mathematics, helping readers understand how to apply optimization techniques to solve actual problems. This Second Edition has been thoroughly revised, incorporating current optimization techniques as well as the improved MATLAB tools. Two important new features of the text are: Introduction to the scan and zoom method, providing a simple, effective technique that works for unconstrained, constrained, and global optimization problems; and a new chapter, Hybrid Mathematics: An Application, using examples to illustrate how optimization can develop analytical or explicit solutions to differential systems and data fitting problems. Each chapter ends with a set of problems that give readers an opportunity to put their new skills into practice. Almost all of the numerical techniques covered in the text are supported by MATLAB code, which readers can download on the text's companion Web site: www.wiley.com/go/venkat2e and use to begin solving problems on their own. This text is recommended for upper-level

undergraduate and graduate students in all areas of engineering as well as other disciplines that use optimization techniques to solve design problems Handbook of Mathematics for Engineers and Scientists Andrei D. Polyenin, Alexander V. Manzhirov, 2006-11-27 Covering the main fields of mathematics this handbook focuses on the methods used for obtaining solutions of various classes of mathematical equations that underlie the mathematical modeling of numerous phenomena and processes in science and technology The authors describe formulas methods equations and solutions that are frequently used in scientific and engineering applications and present classical as well as newer solution methods for various mathematical equations The book supplies numerous examples graphs figures and diagrams and contains many results in tabular form including finite sums and series and exact solutions of differential integral and functional equations **Proceedings of the 2nd International Conference on Cognitive Based Information Processing and Applications (CIPA 2022)** Bernard J. Jansen, Qingyuan Zhou, Jun Ye, 2023-04-08 This book contains papers presented at the 2nd International Conference on Cognitive based Information Processing and Applications CIPA in Changzhou China from September 22 to 23 2022 The book is divided into a 2 volume series and the papers represent the various technological advancements in network information processing graphics and image processing medical care machine learning smart cities It caters to postgraduate students researchers and practitioners specializing and working in the area of cognitive inspired computing and information processing **Development and Evaluation of an Automated Multidimensional Test Assembly Method Based on Quadratic Knapsack Programming** Raymond Mapuranga, 2007 Applied Numerical Methods Using MATLAB Won Y. Yang, 2005-05-02 In recent years with the introduction of new media products there has been a shift in the use of programming languages from FORTRAN or C to MATLAB for implementing numerical methods This book makes use of the powerful MATLAB software to avoid complex derivations and to teach the fundamental concepts using the software to solve practical problems Over the years many textbooks have been written on the subject of numerical methods Based on their course experience the authors use a more practical approach and link every method to real engineering and or science problems The main benefit is that engineers don't have to know the mathematical theory in order to apply the numerical methods for solving their real life problems An Instructor's Manual presenting detailed solutions to all the problems in the book is available online **Proceedings of Fifth International Conference on Soft Computing for Problem Solving** Millie Pant, Kusum Deep, Jagdish Chand Bansal, Atulya Nagar, Kedar Nath Das, 2016-04-20 The proceedings of SocProS 2015 will serve as an academic bonanza for scientists and researchers working in the field of Soft Computing This book contains theoretical as well as practical aspects using fuzzy logic neural networks evolutionary algorithms swarm intelligence algorithms etc with many applications under the umbrella of Soft Computing The book will be beneficial for young as well as experienced researchers dealing across complex and intricate real world problems for which finding a solution by traditional methods is a difficult task The different application areas covered in the proceedings are Image Processing Cryptanalysis
