

Chapter 1 Section 2 Notes

The scientific method is a systematic process that is used to investigate natural phenomena. It involves making observations, asking questions, forming hypotheses, testing hypotheses, and drawing conclusions.

Primary and Secondary Sources

Information can come from two sources: primary sources and secondary sources. Primary sources are original information that is collected directly from the source.

They are written or recorded by the people who lived at a particular moment in time. Primary sources can be written or recorded in many different ways, including books, articles, letters, diaries, photographs, audio recordings, and video recordings.

Secondary sources are information that is gathered from primary sources. They are written or recorded by someone who is not the original source of the information. Secondary sources can be written or recorded in many different ways, including books, articles, and documentaries.

Secondary sources are often used to provide context and background information for primary sources. They can also be used to verify the accuracy of primary sources.

Secondary sources are often used in research to provide context and background information for primary sources. They can also be used to verify the accuracy of primary sources.

Primary Sources

Primary sources are a first-hand account of an event or experience. They are written or recorded by the people who lived at a particular moment in time. Primary sources can be written or recorded in many different ways, including books, articles, letters, diaries, photographs, audio recordings, and video recordings.

Secondary Sources

Secondary sources are information that is gathered from primary sources.
