- Evaluate $(n - v)^2 + 3v^3$ if $n = 5$ and $v = -2$.
- Determine whether the statement is *sometimes*, *always*, or *never* true. Explain your reasoning.
If a and b are real numbers, then $-|a + 2b|$ is negative.
- The formula for the volume of a cylinder is $V = \pi r^2 h$, where r is the radius of the base and h is the height of the cylinder. Find the volume of a cylinder with a radius of 1.2 inches and a height of 3 inches. Use 3.14 for π .

Arfken, 2013-09-11 *Essentials of Math Methods for Physicists* aims to guide the student in learning the mathematical
language used by physicists by leading them through worked examples and then practicing problems The pedagogy is that of
introducing concepts designing and refining methods and practice them repeatedly in physics examples and problems
Geometric and algebraic approaches and methods are included and are more or less emphasized in a variety of settings to
accommodate different learning styles of students Comprised of 19 chapters this book begins with an introduction to the
basic concepts of vector algebra and vector analysis and their application to classical mechanics and electrodynamics The
next chapter deals with the extension of vector algebra and analysis to curved orthogonal coordinates again with applications
from classical mechanics and electrodynamics These chapters lay the foundations for differential equations variational
calculus and nonlinear analysis in later discussions High school algebra of one or two linear equations is also extended to
determinants and matrix solutions of general systems of linear equations eigenvalues and eigenvectors and linear
transformations in real and complex vector spaces The book also considers probability and statistics as well as special
functions and Fourier series Historical remarks are included that describe some physicists and mathematicians who
introduced the ideas and methods that were perfected by later generations to the tools routinely used today This monograph
