

Chemical Compatibility of Representative Building Sealants and Adhesives/Primers

DuPont™ Tyvek® Commercial Building Envelope Solutions Products

Commercial construction professionals will often question whether a sealant or adhesive/primer can come in contact with DuPont Building Envelope Solutions products, including building wraps, fluid applied membranes, and self-adhered flashing. Building sealants can play an essential role in protecting the building envelope from air and water infiltration. The chemical compatibility of sealant or adhesive/primer DuPont Building Envelope Solutions products is important to ensure the effective long term performance and durability of a wall assembly. When creating a sealant joint, both the chemical compatibility and the level of adhesive bonding between the sealant and the DuPont Building Envelope Solutions products must be considered in order to achieve the desired air and water seal.

In general, most sealants used in commercial construction are chemically compatible with DuPont™ Tyvek® air and water barrier membranes and DuPont Flashing Products.

The tables below list representative examples of sealants, as well as adhesives/primers, that are chemically compatible with DuPont™ Tyvek® Weather-Resistive Barriers (WRBs) and DuPont Flashing Products, based on internal DuPont testing. Additional sealants and adhesives/primers may be suitable but were not tested by DuPont™. It is recommended that field testing be conducted to determine the acceptability of a specific product for the intended use in the particular wall assembly design.

The sealant products listed in the table below were determined to have acceptable chemical compatibility¹ with DuPont™ Tyvek® Commercial Building Wraps and DuPont Self-Adhered Flashing Products:
