Feedback Control of Dynamic Systems and MATLAB Package Gene Franklin, Control of Partially-Known Dynamical Systems Ahmad A. Bahnasawi, Magdi S. Mahmoud, 1989-06-16 The main objective of this monograph is to develop efficient techniques for tackling the control problems of partially known dynamical systems This broad class of systems has a fundamental feature Knowledge of the dynamic characteristics of the control plant is not complete In one category the missing knowledge is due to the unmodeled high frequency parasitics adaptive systems In another category some of the model parameters are unknown but bounded uncertain systems The book concentrates on reduced order adaptive control schemes and deterministic stabilizing control methodologies Special emphasis has been placed on presenting new results establishing efficient control laws and treating both small scale and large scale problems Effects of external disturbances state parameter errors and interconnection patterns have been investigated and dealt with in constructing various controller structures

Feedback Controls of Dynamic Systems Gene F. Franklin, J. David Powell, Abbas Emami-Naeini, 2010-06-10 This package consists of the textbook plus MATLAB Simulink Student Version 2010a For senior level or first year graduate level courses in control analysis and design and related courses within engineering science and management This revision of a top selling textbook on feedback control with the associated web site FPE6e.com provides greater instructor flexibility and student readability Chapter 4 on A First Analysis of Feedback has been substantially rewritten to present the material in a more logical and effective manner A new case study on biological control introduces an important new area to the students and each chapter now includes a historical perspective to illustrate the origins of the field As in earlier editions the book has been updated so that solutions are based on the latest versions of MATLAB and SIMULINK Finally some of the more exotic topics have been moved to the web site

Feedback Stabilization of Controlled Dynamical Systems Nicolas Petit, 2017-03-24 This book is a tribute to

Professor Laurent Praly and follows on from a workshop celebrating the occasion of his 60th birthday It presents new and unified visions of the numerous problems that Laurent Praly has worked on in his prolific career adaptive control output feedback and observers stability and stabilization His main contributions are the central topic of this book The book collects contributions written by prominent international experts in the control community addressing a rich variety of topics emerging ideas advanced applications and theoretical concepts Organized in three sections the first section covers the field of adaptive control where Laurent Praly started his career The second section focuses on stabilization and output feedback which is also the topic of the second half of his career Lastly the third section presents the emerging research that will form Laurent Praly s scientific legacy

Feedback Systems Karl Johan Åström, Richard Murray, 2021-02-02 This book provides an introduction to the mathematics needed to model analyze and design feedback systems It is an ideal textbook for undergraduate and graduate students and is indispensable for researchers seeking a self contained reference on control theory Unlike most books on the subject Feedback Systems develops transfer functions through the exponential response of a system and is accessible across a range of disciplines that utilize feedback in physical biological information and economic systems Karl str m and Richard Murray use techniques from physics computer science

Independent Study in Feedback Control of Dynamic Systems Duane Peter Stevens, 1999

Feedback Control Theory John C. Doyle, Bruce A. Francis, Allen R. Tannenbaum, 2013-04-09 An excellent introduction to feedback control system design this book offers a theoretical approach that captures the essential issues and can be applied to a wide range of practical problems Its explorations of recent developments in the field emphasize the relationship of new procedures to classical control theory with a focus on single input and output systems that keeps concepts accessible to students with limited backgrounds The text is geared toward a

single semester senior course or a graduate level class for students of electrical engineering The opening chapters constitute a basic treatment of feedback design Topics include a detailed formulation of the control design program the fundamental issue of performance stability robustness tradeoff and the graphical design technique of loopshaping Subsequent chapters extend the discussion of the loopshaping technique and connect it with notions of optimality Concluding chapters examine controller design via optimization offering a mathematical approach that is useful for multivariable systems
