[A Comprehensive Guide to Java GUI Programming with SQLite](#)

Vivian Siahaan, Rismon Hasiholan Sianipar, 2020-01-02 The lessons in this book are a highly organized and well indexed set of tutorials meant for students and programmers. NetBeans a specific IDE Integrated Development Environment is used to create GUI Graphical User Interface applications. The finished product is the reward but the readers are fully engaged and enriched by the process. This kind of learning is often the focus of training. In this book you will learn how to build from scratch a SQLite database management system using Java. In designing a GUI and as an IDE you will make use of the NetBeans tool. Gradually and step by step you will be taught how to use SQLite in Java. In chapter one you will learn How to create SQLite database and six tables. In chapter two you will study Creating the initial three table projects in the school database Teacher table TClass table and Subject table. Creating database configuration files. Creating a Java GUI for viewing and navigating the contents of each table. Creating a Java GUI for inserting and editing tables and Creating a Java GUI to join and query the three tables. In chapter three you will learn Creating the main form to connect all forms. Creating a project will add three more tables to the school database the Student table the Parent table and Tuition table. Creating a Java GUI to view and navigate the contents of each table. Creating a Java GUI for editing inserting and deleting records in each table. Creating a Java GUI to join and query the three tables and all six tables. In chapter four you will study how to query the six tables. In chapter five you will create Bank database and its four tables. In chapter six you will learn the basics of cryptography using Java. Here you will learn how to write a Java program to count Hash MAC Message Authentication Code store keys in a KeyStore generate PrivateKey and PublicKey encrypt decrypt data and generate and verify digital prints. In chapter seven you will learn how to create and store salt passwords and verify them. You will create a Login table. In this case you will see how to create a Java GUI using NetBeans to implement it. In addition to the Login table in this chapter you will also create a Client table. In the case of the Client table you will learn how to generate and save public and private keys into a database. You will also learn how to encrypt decrypt data and save the results into a database. In chapter eight you will create an Account table. This account table has the following ten fields account\_id primary key client\_id primarykey account\_number account\_date account\_type plain\_balance cipher\_balance decipher\_balance digital\_signature and signature\_verification. In this case you will learn how to implement generating and verifying digital prints and storing the results into a database. In chapter nine you will create a Client\_Data table which has the following seven fields client\_data\_id primary key account\_id primary\_key birth\_date address mother\_name telephone and photo\_path. In chapter ten you will create Crime database and its six tables. In chapter eleven you will be taught how to extract image features utilizing BufferedImage class in Java GUI.
