Pattern Recognition A Statistical Approach:

Pattern Recognition Pierre A. Devijver,Josef Kittler,1982 **Pattern Recognition** Robert J. Schalkoff,1992 Explores the heart of pattern recognition concepts methods and applications using statistical syntactic and neural approaches Divided into four sections it clearly demonstrates the similarities and differences among the three approaches The second part deals with the statistical pattern recognition approach starting with a simple example and finishing with unsupervised learning through clustering Section three discusses the syntactic approach and explores such topics as the capabilities of string grammars and parsing higher dimensional representations and graphical approaches Part four presents an excellent overview of the emerging neural approach including an examination of pattern associations and feedforward nets Along with examples each chapter provides the reader with pertinent literature for a more in depth study of specific topics A Statistical Approach to Neural Networks for Pattern Recognition Robert A. Dunne,2007-07-30 An accessible and up to date treatment featuring the connection between neural networks and statistics A Statistical Approach to Neural Networks for Pattern Recognition presents a statistical treatment of the Multilayer Perceptron MLP which is the most widely used of the neural network models This book aims to answer questions that arise when statisticians are first confronted with this type of model such as How robust is the model to outliers Could the model be made more robust Which points will have a high leverage What are good starting values for the fitting algorithm Thorough answers to these questions and many more are included as well as worked examples and selected problems for the reader Discussions on the use of MLP models with spatial and spectral data are also included Further treatment of highly important principal aspects of the MLP are provided such as the robustness of the model in the event of outlying or atypical data the influence and sensitivity curves of the MLP why the MLP is a fairly robust model and modifications to make the MLP more robust The author also provides clarification of several misconceptions that are prevalent in existing neural network literature Throughout the book the MLP model is extended in several directions to show that a statistical modeling approach can make valuable contributions and further exploration for fitting MLP models is made possible via the R and S PLUS codes that are available on the book s related Web site A Statistical Approach to Neural Networks for Pattern Recognition successfully connects logistic regression and linear discriminant analysis thus making it a critical reference and self study guide for students and professionals alike in the fields of mathematics statistics computer science and electrical engineering Statistical Approach to the Problem of Learning Pattern Recognition V. A. Kovalevskii,FOREIGN TECHNOLOGY DIV WRIGHT-PATTERSON AFB OHIO.,1970 The paper shows that the problem of learning to recognize patterns is susceptible of statistical formulation and may be viewed as a particular case of the general problem of statistical solutions Learning in this case may be accomplished by two methods one of which is applicable when it is possible to measure directly the risk function characterizing the performance of the machine being taught learning by reinforcement The second method called learning by patterns is used when the risk function cannot be

measured Exact solution of this problem consists in finding the a posteriori distribution of unknown parameters and subsequent averaging of distributions containing these parameters with the above mentioned distribution serving as a weight An evaluation is made of the minimum learning time showing that in the absence of any substantial limitations superimposed on the probability distribution or on the determinant rules the learning process must involve nearly all input signals In the case of multidimensional input signals learning time in the absence of limitations proves to be inadmissibly long
