 prepared slides of the following:
 loose (areolar) connective tissue
 adipose tissue
 dense connective tissue (regular type)
 elastic connective tissue
 reticular connective tissue
 hyaline cartilage
 elastic cartilage
 fibrocartilage
 bone (compact, ground, *v.s.*)
 blood (human smear)

For Optional Activity:

Connective tissues contain a variety of cell types and occur in all regions of the body. They bind structures together, provide support and protection, fill spaces, store fat, and produce blood cells.

Connective tissue cells are often widely scattered in an abundance of intercellular matrix. The matrix consists of fibers and a ground substance of various densities. Many of the prepared slides contain more than the tissue to be studied, so care should be taken to be certain that your view matches the correct tissue. Additional study of bone and blood will be found in later laboratory exercises.

PURPOSE OF THE EXERCISE

To review the characteristics of connective tissues and to observe examples of the major types.

LEARNING OBJECTIVES

After completing this exercise, you should be able to

1. describe the general characteristics of connective tissues;
2. list the major types of connective tissues;
3. describe the special characteristics of each of the major types of connective tissue;
4. indicate a location and function of each type of connective tissue;
5. identify the major types of connective tissues on microscope slides.

PROCEDURE

1. Review a textbook section on *connective tissues*.
2. Complete Part A of Laboratory Report 8.
3. Use a microscope to observe the prepared slides of various connective tissues. As you observe each tissue, look for its special distinguishing features as described in the textbook.
4. Complete Part B of the laboratory report.
5. Test your ability to recognize each of these connective tissues by having a laboratory partner select a slide, cover its label, and focus the microscope on this tissue. Then see if you correctly identify the tissue.
