V. Ramana,2010 Modern Power Systems Control and Operation Atif S. Debs,1988-06-30 Initial material for this book was developed over a period of several years through the introduction in the mid seventies of a graduate level course entitled Control and Operation of Interconnected Power Systems at the Georgia Institute of Technology Subsequent involvement with the utility industry and in teaching continuing education courses on modern power system control and operation contributed to the complimentary treatment of the dynamic aspects of this overall topic In effect we have evolved a textbook that provides a thorough understanding of fundamentals as needed by a graduate student with a prior background in power systems analysis at the undergraduate level and in system theory concepts normally provided at the beginning of the graduate level in electrical engineering It is also designed to provide the depth needed both by the serious graduate student and the power industry engineer involved in the activities of energy control centers and short term operations planning As explained in Chapter 2 the entire book can be covered in a two quarter course sequence The bulk of the material may be covered in one semester For a two semester offering we recommend that students be involved in some project work to further their depth of understanding Utility and consulting industry engineers should concentrate on the more advanced concepts and developments usually available at the latter half of each chapter
