

Deductive and Inductive Arguments from the Internet Encyclopedia of Philosophy - Notes

- When looking at the quality of an argument, it is important to note how well the premises support the conclusion
 - To do so, we ask if the argument is deductive or inductive
- A deductive argument: an argument that is intended by the arguer to be deductively valid to provide a guarantee of the truth of the conclusion provided that the arguments premises are true
 - The premises are intended to provide a very strong support for the conclusion so that if the premises are true, it would be impossible for the conclusion to be false
 - When the premises do succeed in supporting the conclusion, it is a deductive/valid argument
 - When all premises are true, it can also be called a sound argument
- An inductive argument: an argument that is intended by the arguer to be strong enough that if the premises were to be true, that it would unlikely that the conclusion is false
 - Can be affected by obtained new premises but a deductive argument cannot
 - Can also be called a strong argument
 - Conclusion made probable by the premises
 - Can be expressed in many different forms such as based on authority, and based on evidence
- If arguer believes that the truth of the premises definitely establishes the truth of the conclusion then it is deductive
- If arguer believes that the truth of the premises provides only good reasons to believe the conclusion is PROBABLY true, then the argument is inductive
